

STUDY OF CRO & APPLICATION

Aim: To observe how panel control section of CRO work as front control unit. Also panel, frequency, horizontal time base, trigger, holding the synchronization.

APPARATUS: Cathode Ray Oscilloscope, Function generator, connecting wires, frequency, impedance, standard and unknown.

Background:

CRO provides the characteristics as the permanent effects to record the various signal variations. Signal can be displayed as wave diagram. The electron is supplied at the signal with trigger as time is plotted on the CRO screen. Cathode ray oscilloscope trace and various experiments comparison is to record its unknown amplitude, frequency and phase of the waveform. It is also used to observe shape of the waveform. CRO is used for troubleshooting purpose.

It helps us to find out gain of amplifier, test electronic circuits. We can measure amplitude, phase frequency of the waveform as the electron beam points to that value. Thus, it helps us for basic timing parameters in the circuit. CRO CRT screen is divided into grid to assist in correct measurement.

Later digital storage oscilloscope display image and frequency directly on the CRT and store the signal wave. Subsequent to use when great accuracy for further analysis for the period, we will measure amplitude and frequency of the different waveform like wave form, square wave, triangular wave and many more.
