### Abstract

This experiment consists of two parts, both of which make use of the laws of conservation of momentum and energy. The first part was based on using the ballistic pendulum to analyze the collision of the ball with the pendulum catcher, and the second part was based on the analysis of the perfectly inelastic and elastic collisions. Both parts yield satisfactory results with relatively small error.

### Introduction

The experiment uses the concept of conservation of energy, discovery of which was two centuries in the past. Herman von Helmholtz was the first to refer the phenomenon in his book "On the Conservation of Force" (1847) ("Hermann von Helmholtz").

The law of conservation of energy states that the total energy of an isolated system to be conserved over time. We encounter the law in action in everyday life. For example, when a car with a velocity hits a parked car, the parked car will also move, as the energy of moving car is conserved and transformed to parked car.

In the laboratory, the muzzle velocity will be determined with the use of conservation principle of momentum and energy. In the second part, we will study elastic and inelastic collisions with the help of the conservation law, as well.
