

Chapter 31: Fungi

Role in Ecosystems

- Fungi are **diverse, widespread, and essential** for ecosystem health.
- Some are single-celled but most are complex multicellular organisms.
- They function as:
 - **Decomposers** – break down dead organic material.
 - **Parasites** – absorb nutrients from living hosts.
 - **Mutualists** – exchange benefits with hosts (e.g., plants).

Concept 31.1: Fungi as Heterotrophs

- Fungi are **heterotrophs** that absorb nutrients **outside their bodies** (absorption).
- Use **hydrolytic enzymes** to break down complex molecules.
- Digest materials from a wide range of sources, both living and dead.

Specialized Feeding Structures

- **Hyphae**: threadlike filaments adapted for absorption.
- **Hauatoria**: specialized hyphae for feeding on plants/animals.
- **Mycorrhizae**: symbiotic association between fungal hyphae & plant roots.
 - Found in >80% of terrestrial plants.
 - **Plants**: get more water & nutrients.
 - **Fungi**: get organic molecules.
 - Two main types:
 - **Ectomycorrhizae** – hyphae form sheaths over roots.
 - **Arbuscular mycorrhizae** – penetrate root cell walls.

Body Structure

- **Multicellular filaments (mycelia) & unicellular yeasts**.
- **Mycelium**: network of hyphae → increases surface area for absorption.
- **Cell walls**: made of **chitin**.
- **Hyphae** may be:
 - **Septate** – divided by cross walls with pores.
 - **Coenocytic** – no septa; many nuclei in one mass.

Concept 31.2: Reproduction

The first introductory text to present biological concepts through the research that revealed them. Life covers the full range of topics with an integrated experimental focus that flows naturally from the narrative. This approach helps to bring the drama of classic and cutting edge research to the classroom but always in the context of reinforcing core ideas and the innovative scientific thinking behind them. Taylor, 1993. As the first book devoted entirely to addressing the problems at the interface between classical and molecular systematics, this title is particularly timely. This book presents a compilation of primary research reviews and overviews, reports and recommendations for the field of fungal systematics as derived from the National Science Foundation workshop held under the same title in Newport, Oregon. Biology: How Life Works (Volume 1) James Morris, 2013-01-04. Ordinarily

textbooks are developed by first writing chapters, then making decisions about art and images, and finally, once the book is complete, assembling a test bank and ancillary media. This process dramatically limits the integration across resources and reduces art, media, and assessments to ancillary material rather than essential resources for student learning. *Biology How Life Works* is the first project to develop three pillars: the text, the visual program, and the assessment, at the same time. All three pillars were developed in parallel to make sure that each idea is addressed in the most appropriate medium and to ensure authentic integration. These three pillars are all tied to the same set of core concepts, share a common language, and use the same visual palette. In this way, the text, visual program, and assessments are integral parts of student learning rather than just accessories to the text. **Instructor's Resource Manual to Accompany Raven and Johnson Biology, Second Edition** Linda R.
