

Holt Physics-Chapter 4: Forces and The Laws of Motion

1. Section 4-1—Force
 - A. Definition: Force is the cause of an acceleration or the change in an object's velocity
 - B. A force can be a push, a pull, and pressure: force can act directly through physical contact or at a distance like a magnetic field.
 - C. We measure force in **NEWTONS**.

A newton is the force needed to accelerate a 1 kilogram mass by 1 meter per second squared

$$1\text{N} = 1\text{kg} \times 1\text{m/s}^2$$

- D. Newtons ARE NOT units of weight or mass!
- E. Weight: What you weigh is a measure of your mass on the planet earth. Your weight can change relative to your environment! Mr. Price weighs 200 pounds on earth, but on the moon he would weigh only 33 pounds!
- F. While your weight can change your mass is constant regardless of your environment. Although Mr. Price would weigh 33 pounds on the moon his MASS would still be 200 pounds on the moon, Jupiter or in a black hole!
- G. Newtons are a measure of force—we can use newtons to measure how much force the earth is exerting on your body (your weight) but newtons are units of force!
- H. Conversion Factors

$$1 \text{ pound} = 4.448 \text{ newtons}$$

$$1 \text{ newton} = 0.225 \text{ pounds}$$

Serway, 2002 Physics Holt Rinehart & Winston, 2001-02 *John Stewart Bell and Twentieth-Century Physics* Andrew Whitaker, 2016-07-07 John Stewart Bell 1928 1990 was one of the most important figures in twentieth century physics famous for his work on the fundamental aspects of the century's most important theory quantum mechanics While the debate over quantum theory between the supremely famous physicists Albert Einstein and Niels Bohr appeared to have become sterile in the 1930s Bell was able to revive it and to make crucial advances Bell's Theorem or Bell's Inequalities He was able to demonstrate a contradiction between quantum theory and essential elements of pre quantum theory locality and causality The book gives a non mathematical account of Bell's relatively impoverished upbringing in Belfast and his education It describes his major contributions to quantum theory but also his important work in the physics of accelerators and nuclear and elementary particle physics **Classical Electromagnetism via Relativity** William Geraint Vaughan Rosser, 2013-11-11 *Quantum Entanglement* Jed Brody, 2020-02-18 A concise non technical exploration of quantum entanglement the enigma Albert Einstein called spooky action at a distance and how it contradicts our assumptions about the ultimate nature of reality Quantum physics is notable for its brazen defiance of common sense Think of Schrödinger's Cat famously both dead and alive An especially rigorous form of quantum contradiction occurs in experiments with entangled particles Our common assumption is that objects have properties whether or not anyone is observing them and the measurement of one can't affect the other Quantum entanglement called by Einstein spooky action at a distance rejects this assumption offering impeccable reasoning and irrefutable evidence of the opposite Is quantum entanglement mystical or just mystifying In this volume in the MIT Press Essential Knowledge series Jed Brody equips readers to decide for themselves He explains how our commonsense assumptions impose constraints from which entangled particles break free Brody explores such concepts as local realism Bell's inequality polarization time dilation and special relativity He introduces readers to imaginary physicists Alice and Bob and their photon analyses points out that it's easier to reject falsehood than establish the truth and reports that some physicists explain entanglement by arguing that we live in a cross section of a higher dimensional reality He examines a variety of viewpoints held by physicists including quantum decoherence Niels Bohr's Copenhagen interpretation genuine fortuitousness and QBism This relatively recent interpretation an abbreviation of quantum Bayesianism holds that there's no such thing as an absolutely accurate objective probability out there that quantum mechanical probabilities are subjective judgments and there's no action at a distance spooky or otherwise Elements of physics, by C.H.
