

FAMILY CASE STUDY AND CARE PLAN

P.S. was born at 25 weeks gestation, weighing 620 grams at birth. She was hospitalized in the NICU for 10 weeks, discharged at 35 weeks corrected gestational age. Her NICU course was uneventful except for the development of Bronchopulmonary Dysplasia (BPD). Her parents, who are married and have no local family support, live in a two bedroom apartment. She is their only child. Both were employed outside of the home, but the mother took an extended leave of absence until P.S. was off oxygen and monitors. The parents were in the NICU daily, and were committed to taking her home as soon as possible with oxygen, nasogastric tube feedings, and multiple medications. A potential discharge date was chosen two weeks in advance, and no changes in care were made during that time. The parents brought a list of potential pediatricians to the NICU for feedback, and chose a community pediatrician near their home as a primary provider. Home nursing visits and in-home occupational therapy were arranged. Follow-up appointments were scheduled with ophthalmology, BPD clinic/pulmonology, and her primary pediatrician. Her parents met all providers before discharge and learned all aspects of her care. They were familiar with her breathing patterns and knew her signs of respiratory distress and actions to take in the event of an emergency. They also completed an infant CPR class. The nutrition team taught the parents how to mix her high-caloric formula, and equipment teaching was completed by the DME provider (oxygen concentrator and tanks, apnea monitor, pulse oximeter, and nebulizer). Respiratory therapists taught the parents to administer MDI and nebulized medications. Prescriptions were filled by the parents, brought to the NICU, and verified by the primary nurse. The parents had a written medication record, their infant's admission and discharge summaries, appointment scheduling, and emergency information in their discharge packet. Car-seat testing was completed.
