Chapter 5 Populations Biology:

Biology Glencoe/McGraw-Hill,1994-07 **The Origins of Theoretical Population Genetics** William B. Provine,2020-07-24 Tracing the development of population genetics through the writings of such luminaries as Darwin Galton Pearson Fisher Haldane and Wright William B Provine sheds light on this complex field as well as its bearing on other branches of biology Cultural Evolution Alex Mesoudi,2024-05-31 Charles Darwin changed the course of scientific thinking by showing how evolution accounts for the stunning diversity and biological complexity of life on earth Recently there has also been increased interest in the social sciences in how Darwinian theory can explain human culture Covering a wide range of topics including fads public policy the spread of religion and herd behavior in markets Alex Mesoudi shows that human culture is itself an evolutionary process that exhibits the key Darwinian mechanisms of variation competition and inheritance This cross disciplinary volume focuses on the ways cultural phenomena can be studied scientifically from theoretical modeling to lab experiments archaeological fieldwork to ethnographic studies and shows how apparently disparate methods can complement one another to the mutual benefit of the various social science disciplines Along the way the book reveals how new insights arise from looking at culture from an evolutionary angle Cultural Evolution provides a thought provoking argument that Darwinian evolutionary theory can both unify different branches of inquiry and enhance understanding of human behavior *Advances in Parasitology* ,1998-08-10 *Advances in Parasitology* is a series of up to date reviews of all areas of interest in contemporary parasitology It includes medical studies on parasites of major influence such as typanosomiasis and scabies and more traditional areas such as zoology taxonomy and life history which shape current thinking and applications **The Ecology of Malaria Vectors** Jacques Derek Charlwood,2019-07-31 This practical book covers all aspects of the biology of malaria vectors with notes on the vectors of dengue It is the first work in this field to concentrate on mosquitoes rather than covering all disease vectors Authored by renowned field entomologist Jacques Derek Charlwood it disseminates his vast experience working on mosquito biology ecology and the evaluation of new vector control tools across five continents over the past 40 years Covering all aspects from classification and systematics population dynamics vector control to surveillance and sampling epidemics and a selection of case histories the book also considers genetics and resistance *Aedes* biology and malaria and dengue models It is designed to fill the gap between very specialized texts and undergraduate books on general disease vectors and is ideal as a textbook for postgraduate courses in entomology and mosquito vectors of disease *Orangutans* Serge A. Wich,uci Suci Utami Atmoko,Tatang Mitra Setia,Carel P. van Schaik,2010-01-07 This book describes one of our closest relatives the orangutan and the only extant great ape in Asia It is increasingly clear that orangutan populations show extensive variation in behavioural ecology morphology life history and genes Indeed on the strength of the latest genetic and morphological evidence it has been proposed that orangutans actually constitute two species which diverged more than a million years ago one on the island of Sumatra the other on Borneo with

the latter comprising three subspecies This book has two main aims The first is to carefully compare data from every orangutan research site examining the differences and similarities between orangutan species subspecies and populations The second is to develop a theoretical framework in which these differences and similarities can be explained To achieve these goals the editors have assembled the world's leading orangutan experts to rigorously synthesize and compare the data quantify the similarities or differences and seek to explain them *Orangutans* is the first synthesis of orangutan biology to adopt this novel comparative approach It analyses and compares the latest data developing a theoretical framework to explain morphological life history and behavioural variation Intriguingly not all behavioural differences can be attributed to ecological variation between and within the two islands relative rates of social learning also appear to have been influential The book also emphasizes the crucial impact of human settlement on orangutans and looks ahead to the future prospects for the survival of critically endangered natural populations
