## Chapter 1

### Getting started

- 1 excretion, sensitivity, growth, reproduction, movement, nutrition, respiration
- 2 See Topic 1.1 for full descriptions of each term. Learners are not likely to be able to describe each one correctly at this stage. Their answers will provide you with an opportunity to pick up any misconceptions.

### Science in context: The puzzle of the platypus

There are no 'correct' answers to these discussion questions. Learners may suggest these ideas, or you could use them to prompt discussion:

- 1 Using the same two-word name means that scientists all over the world can be sure they are talking about the same organism, no matter what language they speak. Some learners may say it is not a good idea – for example, because these names look 'weary' and unfamiliar, so may put some people off learning about different organisms.
- 2 In the 18th century, Latin was the language of education in Europe. In some ways, it is not a bad idea to use a language that no one speaks now, so it avoids confusion. If we used English or Spanish or Mandarin, then people speaking those languages might get mixed up between common names and Latin names. But the names can be a bit difficult to deal with for many people.
