UV Coatings Reinhold Schwalm, 2006-12-21 Since UV curing light induced polymerisation of multifunctional oligomers is a very ecoefficient and energy saving curing method the growth rates of UV curable coatings are in the range of 10% per year The typical UV coatings are solvent free 100% solids thus helping the industry and the environment to reduce significantly VOC volatile organic compounds Recently the automotive industry has discovered that UV cured coatings are very scratch resistant which stimulated very extensive work into the development of UV coatings for automotive applications Since UV curing is very universal also other systems

besides the 100% solid typical UV coatings are developed like waterbased UV UV powder and Dual cure UV and thermal systems UV Coatings contains an overview of the technology the curing process including the equipment necessary the raw materials resins diluents photoinitiators used the advantages and drawbacks of this fast emerging technology as well as proposed technical solutions to tackle the disadvantages Structure property relationships will be given especially regarding the mechanical properties of coatings as well as scratch resistance mainly dealing with automotive performance criteria The main part of the book will deal with new developments like water based UV coatings UV powder coatings and dual cure systems cured by UV and thermal energy which have been developed to cure the coating on three dimensional substrates in shadow areas The main applications of UV Coatings will be described starting with the classical ones on temperature sensitive substrates like wood paper and plastics where the UV curable coatings are already well established Looking at UV curing as a key to scratch resistant automotive clear coats Ecoefficiency of UV Coatings Comprehensive overview of the technology materials and markets *Coating Materials* Akarsh Verma,Sushanta K.
