**Scott, Foresman Geometry: Tests**, 1990      **Fundamental Studies of Medium-structure Interaction** Jesse L. Kirkland, Robert E. Walker, 1972      **Modeling of Beams and Arches Made from Processed Snow and Subjected to Static Loads** James M. Watt, 1969 The report describes the modeling procedures and results of static loading of structural elements made of processed snow The general objective was to study the response of processed snow beams and arches to static loads and to formulate criteria that will make it possible to design processed snow structures to resist the airblast effects of nuclear explosions The primary objective was to determine the response and verify the adequacy of the modeling procedures for snow structures subjected to static loadings Author      **Penetration Into Concrete of Gamma Radiation from Fallout** W. F. Titus, 1960 The penetration into concrete of gamma radiation from fallout has been measured in an idealized geometry as a function of time after the detonation of a nuclear device At the same time the exposure dose rate in air at heights of 3 and 9 ft above the ground was measured with two detectors suspended from a tower and shielded from above with lead so as to be sensitive primarily to radiation from fallout on the ground For this test a sandwich made of seven concrete slabs forming a mass of concrete with face dimensions large enough to reduce edge effects to a negligible amount was buried with its top surface flush with the ground Remote reading detectors were placed between the concrete slabs thus permitting measurements of dose rate as a function of depth in concrete The concrete mass and the tower were located in the center of a cleared and leveled area approximately 200 yd in diameter Thus the gamma radiation at the detectors originated from an essentially infinite plane source of radiation Results are presented both as a function of time after detonation and of depth of penetration of the radiation into concrete A comparison of the results with theoretical calculations is made Author      **Parametric Methods for Beginners** Umut Toker, 2022-12-30 This book introduces architectural applications of parametric methods in design drawing direct connections between each phase of the architectural design process with relevant parametric approaches Readers will find applications of parametric methods with straightforward explanations of concepts commands as well as applicable examples for each phase of the architectural design process In addition to learning about the historical and conceptual background of parametric design readers can use this book as a go to source during their day to day design practice Chapters are organized according to different phases of the architectural design process such as site analysis spatial organization skin systems and environmental performance analyses Together they deliver concepts applications and examples utilizing in depth visual guides that explain commands their outcomes and their interrelationships With over 350 images this book includes examples from the author's own design studio and parametric design teaching in elective classes Based on the Rhinoceros and Grasshopper platforms this book is an accessible yet in depth resource for architecture students and early professionals who are considering integrating parametric applications into their design processes      **WT-**, 1960 Series consists of individual technical reports      **A Study in the Psychology of**
