My lab practical scheduled for _____.

Station # 1: Elliptical Orbits and Eccentricity

WORTH 5 POINTS

Your goal is to draw an ellipse based on the distance from the foci given. You will then measure the major axis and distance between foci to determine eccentricity.

Procedures:

1. Place the two push pins at the correct distance. Loop the string around the two push pins and draw the ellipse. Remember: Make sure the string is under the fat part of the push pins so that it stays even.
2. Use a metric ruler to measure to the nearest tenth of a centimeter (0.1):
 - a. the distance between the foci (the two push pins)
 - b. the length of the major axis (the distance across the ellipse through the two foci points)

$$\text{Eccentricity} = \frac{\text{distance between foci}}{\text{length of major axis}}$$
