Purchasers can usually download a free scanned copy of the original book without typos from the publisher. Not indexed. Not illustrated. 1888 edition. Excerpt: apparel and sought and obtained employment as a teamster in the quartermasters department. Her features were very large and so coarse and masculine was her general appearance that she would readily have passed as a man and in her case the deception was no doubt easily practiced. Next day the she dragoon was caught and proved to be a rather prepossessing young woman and though necessarily bronzed and hardened by exposure I doubt if even with these marks of campaigning she could have deceived as readily as did her companion. How the two got acquainted I never learned and though they had joined the army independently of each other yet an intimacy had sprung up between them long before the mishaps of the foraging expedition. They both were forwarded to army headquarters and when provided with clothing suited to their sex sent back to Nashville and thence beyond our lines to Louisville. On January 9 by an order from the War Department the Army of the Cumberland had been divided into three corps designated the Fourteenth, Twentieth and Twenty first. This order did not alter the composition of the former grand divisions nor change the commanders but the new nomenclature was a decided improvement over the clumsy designations Right Wing, Centre and Left Wing which were well calculated to lead to confusion. Sometimes McCooks wing became the Twentieth Corps and my division continued of the same organization and held the same number as formerly the Third Division Twentieth Corps. My first brigade was now commanded by Brigadier General William H Lytle the second by Colonel Bernard Laiboldt and the third by Colonel Luther P Bradley. On the 4th of March I was directed to move in light marching order toward Franklin and

*Principles of Laser Spectroscopy and Quantum Optics* Paul R. Berman, Vladimir S. Malinovsky, 2011-01-02 *Principles of Laser Spectroscopy and Quantum Optics* is an essential textbook for graduate students studying the interaction of optical fields with atoms. It also serves as an ideal reference text for researchers working in the fields of laser spectroscopy and quantum optics. The book provides a rigorous introduction to the prototypical problems of radiation fields interacting with two and three level atomic systems. It examines the interaction of radiation with both atomic vapors and condensed matter systems, the density matrix and the Bloch vector and applications involving linear absorption and saturation spectroscopy. Other topics include hole burning, dark states, slow light and coherent transient spectroscopy as well as atom optics and atom interferometry. In the second half of the text the authors consider applications in which the radiation field is quantized. Topics include spontaneous decay, optical pumping, sub-Doppler laser cooling, the Heisenberg equations of motion for atomic and field operators and light scattering by atoms in both weak and strong external fields. The concluding chapter offers methods for creating entangled and spin-squeezed states of matter. Instructors can create a one semester course based on this book by combining the introductory chapters with a selection of the more advanced material. A solutions manual is available to teachers.
