

Chapter 3- Vectors and Motion in Two Dimensions

3.1 Using Vectors

- Two dimensional motion- moving horizontally and vertically at the same time
- Addition, subtraction, multiplication, and components apply to all types of vectors, not just displacement
- Describe a vector by specifying both magnitude and direction
- Two vectors are equal if they have the same magnitude and direction, regardless of starting points
- Net displacement- describes net result of A, then B

$$\vec{C} = \vec{A} + \vec{B}$$

- Multiplying a vector by a positive scalar gives another vector of different magnitude but pointing in the same direction
- Zero vector- obtained by multiplying A by 0

Zero length or magnitude

- Multiplying by negative number

$$\vec{A} \times -\vec{A} = 0$$

Subtracting vectors

- Draw A
- Place tail of B at the tip of A
- Draw arrow from tip of B to tail of A

$$A - B = A + C - B$$

Discovering Mathematics with Maple R.J. Stroeker, J.F. Kaashoek, 2012-12-06 his book grew out of the wish to let students of econometrics get acquainted with the powerful techniques of computer algebra at an early stage in their curriculum As no textbook available at the time met our requirements as to content and presentation we had no other choice than to write

our own course material The try out on a group of 80 first year students was not without success and after adding some necessary modifications the same material was presented to a new group of students of similar size the year after Some more adjustments were made and the final result now lies before you Working with computer algebra packages like Derive Mathematica and Maple over many years convinced us of the favourable prospects of computer algebra as a means of improving the student s understanding of the difficult concepts on which mathematical techniques are often based Moreover advanced mathematical education be it for mathematics itself or for mathematical statistics operations research and other branches of applied mathematics can greatly profit from the large amount of non trivial mathematical knowledge that is stored in a computer algebra system Admittedly the fact remains that many a tough mathematical problem such as solving a complicated non linear system or obtaining a finite expression for a multiple parameter integral can not easily be handled by computer algebra either if at all
