

Chapter 3

The World of Birds

Have you waken up to the chirping of birds in the morning? If you look out of your windows, you would see many types of birds on the sky and most beautiful animals on the Earth. There are many colourful birds around us. We all love to watch them. Human being got the idea of making aeroplanes from the birds.

Special Features of Birds

We know that a bird can fly, while other animals cannot. What makes a bird fly? A bird has many special features that other animals do not have.

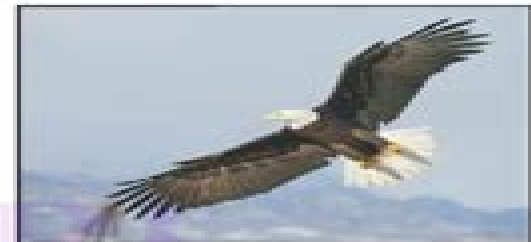

A bird has very light body. It helps it to remain in the air for long time.

The bones of a bird are hollow and filled with air. This makes them light. Though its bones are light but they are very strong.

The body of a bird is boat-shaped. This helps it to cut through the air.

A bird has two wings. The wings are like its arms. They have feathers that help it to fly in the air.

The muscles of a bird are very strong. They help to move the wings up or down, forward or backward. These muscles are called **flight muscles**.
