## Chapter 5      UPS Theory

---

### 5.1      Why is a UPS Needed

A sudden loss of power will disrupt most business operations, it is not only total mains failures or 'blackouts' which can trigger devastating effects. Many electrical loads, for example computer systems, are equally susceptible to power sags, brown-outs, black-outs, power spikes and surges, noise and radio frequency interference, and supply frequency changes.

Such loads are often referred to as 'critical loads', partly because their continuous operation is fundamental to the functioning of the business, and also because they require a more stable and reliable power source than that generally offered by the utility mains supply in order to guarantee their correct function.

#### 5.1.1      Critical Load Applications

The numbers and types of load falling into the 'critical' category are rapidly expanding as an ever increasing range of microprocessor-based equipment enters both the industrial and commercial marketplaces. This is typified by the growth of on-line transaction processing and E-commerce where 24 hour trading demands absolute power quality with zero downtime.

Among typical critical loads are:

- Computers – e.g. data processing and control systems.
- Industrial process equipment – e.g. precision manufacturing.
- Medical equipment – e.g. life support and monitoring systems.
- Telecommunications network equipment – e.g. PABX.
- Point of sales (POS) terminals – e.g. retailing environment.
- On-line business transactions – e.g. internet shopping.

The effects of an inadequate supply to a critical load can include:

- Cessation of the business process – i.e. a total inability to trade and/or communicate
- data loss or corruption due to software crashing
- Expensive hardware failure including component damage – e.g. due to power sags, spikes etc.
- Production loss due to incorrect operation of a manufacturing process and possible production equipment damage
- Inappropriate control system operation
- Lost business due to failed POS or telecommunications equipment
- Possible time penalty paid to repair/reset affected systems.

Scale-ups and High-Growth Firms Alex Coad, Anders Bornhäll, Sven-Olov Daunfeldt, Alexander McKelvie, 2024-03-14 This open access book goes into the details of the characteristics of scale ups touching upon various theoretical perspectives stages of growth models the role of intangible capital the tradeoffs between fixed costs and marginal costs relating to firm growth to provide a clear definition of this emerging concept Given the disproportionately large economic contribution of a small number of fast growing firms there has been growing interest in a category of dynamic ventures called scale ups The term was popularized by Silicon Valley Venture Capitalists before receiving attention from academics and public policy makers However there remains considerable confusion regarding what a scale up actually is This is an open access book

*Beyond Nonstructural Quantitative Analysis: Blown-ups, Spinning Currents And Modern Science* Yi Lin, Yong Wu, 2002-01-29 This book summarizes the main scientific achievements of the blown up theory of evolution science which was first seen in published form in 1994 It explores using the viewpoint and methodology of the blown up theory possible generalizations of Newtonian particle mechanics and computational schemes developed on Newton s and Leibniz s calculus as well as the scientific systems and the corresponding epistemological propositions introduced and polished in the past three hundred years The authors briefly explain the fundamental concepts then analyze a series of topics and problems of the current active research widely carried out in the natural sciences Along the lines of the analyses they introduce new points of view and the corresponding methods Also they point out that the blown up theory originated from the idea of mutual slavings of materials structures so that numbers are transformed into forms This discovery reveals that nonlinearity is not a problem solvable in the first push system and that the materials property of rotation is not only an epistemology but also a methodology The authors then point to the fact that nonlinearity is a second stir of mutual slavings of materials

*Innovative Start-Ups and the Distribution of Human Capital* Ronney Aamoucke, 2016-09-14 This book contributes to our understanding of the reasons for the uneven geographic emergence and distribution of innovative start ups and human capital analyzing the role of the regional knowledge base and specifically academic knowledge Using extensive datasets from West German regions and advanced econometric tools it confirms a strong relationship between the presence of higher education institutions and the emergence of innovative start ups It also shows that the influence increases in direct relation with the innovativeness of the respective start up and that certain fields of knowledge are more influential than others in fostering innovative start ups In a second step the multidimensional concept of quality of life is used to explain the geography of human capital across West German regions Based on these empirical findings the book shares valuable insights for higher education and regional development policy

**Close-ups and Long Shots in Modern Chinese Cinemas** Hsiu-Chuang Deppman, 2020-10-31 Two of the most stylized shots in cinema the close up and the long shot embody distinct attractions The iconicity of the close up magnifies the affective power of faces and elevates film to the discourse of art The depth of the long shot in contrast indexes the facts of life and reinforces our faith in reality Each configures the relation between image and distance that expands the viewer s power to see feel and conceive To understand why a director prefers one type of shot over the other then is to explore more than aesthetics It uncovers significant assumptions about film as an art of intervention or organic representation Close ups and Long Shots in Modern Chinese Cinemas is the first book to compare these two shots within the cultural historical and cinematic traditions that produced them In particular the global revival of Confucian studies and the transnational appeal of feminism in the 1980s marked a new turn in the composite cultural education of Chinese directors whose shot selections can be seen as not only stylistic expressions but ethical choices responding to established norms about self restraint ritualism propriety and female agency Each of the films discussed Zhang Yimou s Red Sorghum Ang Lee s Lust Caution Hou Hsiao hsien s The Assassin Jia Zhangke s I Wish I Knew and Wei Desheng s Cape No 7 represents a watershed in Chinese cinemas that redefines the evolving relations among film politics and ethics Together these works provide a comprehensive picture of how directors contextualize close ups and long shots in ways that make them interpretable across many films as bellwethers of social change
