Microbiological Examination Methods of Food and Water Neusely da Silva, Marta Hiroto, Taniwaki, Valéria Christina Junqueira, Neliane Silveira, Maristela da Silva do Nascimento, Renato Abeilar Romeiro Gomes, 2012-12-18 *Microbiological Examination Methods of Food and Water* is an illustrated laboratory manual that provides an overview of current standard microbiological culture methods for the examination of food and water adhered to by renowned international organizations such as ISO, AOAC, APHA, FDA and FSIS/USDA. It includes methods for the enumeration of indicator microorganisms, of general contamination indicators of hygiene and sanitary conditions, sporeforming spoilage fungi and pathogenic bacteria. Every chapter begins with a comprehensive in depth and updated bibliographic reference on the microorganism s dealt with in that particular section of the book. The latest facts on the taxonomic position of each group, genus or species are given as well as clear guidelines on how to deal with changes in nomenclature on the internet. All chapters provide schematic comparisons between the methods presented, highlighting the main differences and similarities. This allows the user to choose the method that best meets his/her needs. Moreover, each chapter lists validated alternative quick methods which though not described in the book may and can be

used for the analysis of the microorganisms dealt with in that particular chapter.
