A properly adjusted Bunsen flame is a blue, nonluminous flame.

Experiment 1

Basic Laboratory Operations

- To light and properly adjust the flame of a Bunsen burner
- To develop the skill for properly operating a balance
- To develop the technique of using a pipet
- To determine the density of an unknown substance

OBJECTIVES

The following techniques are used in the Experimental Procedure:

TECHNIQUES

You will use a number of techniques repeatedly throughout your laboratory experience. Seventeen principal techniques are fully described under **Laboratory Techniques** in this manual (pp. 17–42). The application of a technique in the Experimental Procedure is noted in the page margin by the corresponding technique icon. Become familiar with each technique and icon before using it in the experiment.

In this experiment, you will learn several common techniques that are used repeatedly throughout this laboratory manual. You will learn to light and adjust a Bunsen burner, to use a laboratory balance, and to use a pipet. With the skills developed in using a balance and pipet, you will determine the density of a metal and a liquid.

INTRODUCTION

Laboratory burners come in many shapes and sizes, but all accomplish one main purpose: A combustible gas–air mixture yields a hot, efficient flame (Figure 1.1, page 52). The combustible gas used to supply the fuel for the Bunsen burner in most laboratories is natural gas. Natural gas is a mixture of gaseous hydrocarbons, but primarily the hydrocarbon methane, CH_4 . If sufficient oxygen is supplied, methane burns with a blue, **nonluminous** flame, producing carbon dioxide and water as combustion products:

With an insufficient supply of oxygen, small carbon particles are produced, which, when heated to **incandescence**, produce a yellow, luminous flame. The combustion products may, in addition to carbon dioxide and water, include carbon monoxide.

Bunsen Burner

Robert Bunsen, 1811–1899

Hydrocarbon: a molecule consisting of only the elements carbon and hydrogen

Nonluminous: nonglowing or nonluminescent

Incandescence: glowing with intense heat

Guided Inquiry Experiments for General Chemistry Nancy K. Kerner, Ram S. Lamba, 2007-10-19 The use of the laboratory is a valuable tool in developing a deeper understanding of key chemical concepts from the experimental process This lab manual encourages scientific thinking enabling readers to conduct investigations in chemistry It shows how to think about the processes they are investigating rather than simply performing a laboratory experiment to the specifications set by the manual Each experiment begins with a problem scenario and ends with questions requiring feedback on the problem

Laboratory Manual for Principles of General Chemistry J. A. Beran, Mark Lassiter, 2022-09-22 Laboratory Manual for Principles of General Chemistry 11th Edition covers two semesters of a general chemistry laboratory program The material focuses on the lab experiences that reinforce the concepts that not all experimental conclusions are the same and depend on identifying an appropriate experimental procedure selecting the proper apparatus employing the proper techniques systematically analyzing and interpreting the data and minimizing inherent variables As a result of good data a scientific and analytical conclusion is made which may or may not be right but is certainly consistent with the data Experiments write textbooks textbooks don't write experiments A student's scientific literacy grows when experiences and observations associated with the scientific method are encountered Further experimentation provides additional cause effect observations leading to an even better understanding of the experiment The 11th edition's experiments are informative and challenging while offering a solid foundation for technique safety and experimental procedure The reporting and analysis of the data and the pre and post lab questions focus on the intuitiveness of the experiment The experiments may accompany any general chemistry textbook and are compiled at the beginning of each curricular unit An Additional Notes column is included in each experiment's Report Sheet to provide a space for recording observations and data during the experiment Continued emphasis on handling data is supported by the Data Analysis section
