Mabrouki,Azroun Mourade,2024-05-13 Resource depletion and ecological risks are more than ever at the heart of societal and economic debates In the 1970s the developed countries saw the Fordist growth regime crumble in parallel with the growing awareness of the ecological issue Since the first industrial revolutions technological dynamics have been the cause of many environmental problems and there is a consensus on the diagnosis Integrated technologies reduce resource use and or pollution at source by using cleaner production methods This generally leads to a reduction in the by products energy inputs and resources used by companies to produce goods Integrated production technologies reduce negative environmental impacts at source by substituting or modifying cleaner technologies Examples of integrated or cleaner production technologies are the recirculation of materials the use of environmentally friendly materials such as the substitution of water for organic solvents etc However the implementation of integrated production technologies is often hampered by obstacles related to cost coordination and skill inertia problems and to the productive organisation of companies In addition to the high investment costs of new integrated technologies additional barriers may emerge depending on the nature of the environmental problem and the type of environmental regulation in question **Chemical**

**Engineering Volume 2** J H Harker,J R Backhurst,J.F. Richardson,2013-10-22 Chemical Engineering Volume 2 covers the

properties of particulate systems including the character of individual particles and their behaviour in fluids Sedimentation of particles both singly and at high concentrations flow in packed and fluidised beds and filtration are then examined The latter part of the book deals with separation processes such as distillation and gas absorption which illustrate applications of the fundamental principles of mass transfer introduced in Chemical Engineering Volume 1 In conclusion several techniques of growing importance adsorption ion exchange chromatographic and membrane separations and process intensification are described A logical progression of chemical engineering concepts volume 2 builds on fundamental principles contained in Chemical Engineering volume 1 and these volumes are fully cross referenced Reflects the growth in complexity and stature of chemical engineering over the last few years Supported with further reading at the end of each chapter and graded problems at the end of the book

*Algal Technologies for Wastewater Treatment and Resource Recovery* Raul Muñoz,Hardy Temmink,Anthony M. Verschoor,Peter van der Steen,2019-07-26 Over 80% of globally produced wastewater receives little or no treatment before it is disposed into the environment Therefore it is urgent to develop new wastewater treatment technologies that are sustainable in the broad sense of the word i e not only produce high quality effluents but also minimise energy expenses recover energy and nutrients and apply technology that is appropriate in relation to the availability of skilled personnel This book compiles the main outcomes of recent efforts to improve the design of waste stabilisation ponds and confirms the superior performance of high rate algal ponds as a result of process intensification Anaerobic digestion devoted to biogas production continues to be the preferred strategy for the energy valorisation of the algal biomass co digestion with multiple high C N ratio substrates gathering significant attention over the past years The potential of algal biomass as a biosorbent for heavy metal removal Cu Ni F maintains its share in the research field of water bioremediation while research on nutrient removal has focused on providing new insights on the mechanism of nitrogen and phosphorus removal from wastewater in algal bacterial systems Finally it is worth noticing that breakthroughs in complementary fields of research such as nanotechnology or lighting technology are gradually being implemented in algal biotechnology with new products such as nanoparticles for water disinfection or photobioreactors illuminated by low intensity LED panels In Focus a book series that showcases the latest accomplishments in water research Each book focuses on a specialist area with papers from top experts in the field It aims to be a vehicle for in depth understanding and inspire further conversations in the sector

*Journal of Chemical Engineering of Japan* ,2008 Includes abstracts of Kagaku k gaku v 31 Sustainable Carbon Capture Humbul Suleman,Philip Loldrup Fosbøl,Rizwan Nasir,Mariam Ameen,2022-02-16 A comprehensive resource on different aspects of sustainable carbon capture technologies including recent process developments environmentally friendly methods and roadmaps for implementations It discusses also the socio economic and policy aspects of carbon capture and the challenges opportunities and incentives for change with a focus on industry policy and governmental sector Through applications in various fields of environmental health and four selected case studies from four different practical regimes of

carbon capture the book provides guidelines for sustainable and responsible carbon capture and addresses current and future global energy environment and climate concerns      Chemical Engineering Catalog ,1919      Encyclopedia of Renewable Energy, Sustainability and the Environment ,2024-08-09 Encyclopedia of Renewable Energy Sustainability and the Environment Four Volume Set comprehensively covers all renewable energy resources including wind solar hydro biomass geothermal energy and nuclear power to name a few In addition to covering the breadth of renewable energy resources at a fundamental level this encyclopedia delves into the utilization and ideal applications of each resource and assesses them from environmental economic and policy standpoints This book will serve as an ideal introduction to any renewable energy source for students while also allowing them to learn about a topic in more depth and explore related topics all in a single resource Instructors researchers and industry professionals will also benefit from this comprehensive reference Covers all renewable energy technologies in one comprehensive resource Details renewable energies processes from production to utilization in a single encyclopedia Organizes topics into concise consistently formatted chapters perfect for readers who are new to the field Assesses economic challenges faced to implement each type of renewable energy Addresses the challenges of replacing fossil fuels with renewables and covers the environmental impacts of each renewable energy      *Ozone Reaction Kinetics for Water and Wastewater Systems* Fernando J.
