Chemistry in Quantitative Language Christopher O. Oriakhi, 2009 Problem solving is one of the most challenging aspects students encounter in general chemistry courses leading to frustration and failure. Consequently many students become less motivated to take additional chemistry courses after their first year. This book deals with calculations in general chemistry and its primary goal is to prevent frustration by providing students with innovative intuitive and systematic strategies to problem solving in chemistry. The material addresses this issue by providing several sample problems with carefully explained step by step solutions for each concept. Key concepts, basic theories and equations are provided and worked examples are selected to reflect possible ways problems could be presented to students. **Addison-Wesley Chemistry**, 1990

Chemistry Trace Jordan, Neville R. Kallenbach, 2017 *Chemistry: The Molecules of Life* offers chemical insights within the context of health, pharmaceuticals and the function of biological molecules. The contextualized presentation of topics gives students a broad introduction to chemistry and helps them to see the relevance of chemistry to their personal lives.

*Chemistry for the Biosciences* Jonathan Crowe, Tony Bradshaw, 2021 Chemistry enables our eyes to detect the world around us; it determines whether something tastes sweet or sour; it helps genetic information pass accurately from one generation to the next. Ultimately chemistry powers life itself. We don't need to dig very deep to answer the question why do biologists need chemistry. Building on the success of the first three editions, *Chemistry for the Biosciences* introduces students to all the chemistry they need to understand the biological world. Renowned for its clear and straightforward explanations, the book uses everyday examples and analogies throughout to help students get to grips with chemical concepts and presents them in context of biological systems wherever possible so they can see how chemistry relates to their wider studies. With topics drawn from organic, physical and inorganic chemistry, students will encounter a broad range of essential concepts. *Chemistry for the Biosciences* includes many learning features both in print and online to help students grasp these concepts as quickly and thoroughly as possible. From the self-check questions throughout each chapter to help consolidate learning to the Chemical Toolkits and Maths Tools that help students explore terminology, methods and numerical skills that may be unfamiliar, the book is written to be a true course companion for students on biological and biomedical science degrees, one that will help them not only remember the essentials but really understand them, setting students up for success in their later studies.

*The Practice of Chemistry* Donald J. Wink, Sharon Fetzner-Gislason, Sheila McNicholas, 2003-03 Students can't do chemistry if they can't do the math. *The Practice of Chemistry* First Edition is the only preparatory chemistry text to offer students targeted, consistent mathematical support to make sure they understand how to use math, especially algebra, in chemical problem solving. The book's unique focus on actual chemical practice, extensive study tools and integrated media makes *The Practice of Chemistry* the most effective way to prepare students for the standard general chemistry course and bright futures as science majors. This special PowerPoint tour of the text was created by Don Wink. <http://>
