**Redirecting Science** Finn Aaserud, 2003-01-30 This volume is an important study for understanding the complex interconnections between basic science and its sources of economic support in the period between the two world wars. The focus of the study is on the Institute for Theoretical Physics later renamed the Niels Bohr Institute at Copenhagen University and the role of its director the eminent Danish physicist Niels Bohr in the funding and administration of the Institute. Under Bohr's direction the Copenhagen Institute was a central workplace in the development and the formulation of quantum mechanics in the 1920s and later became an important center for nuclear research in the 1930s. Dr Aaserud brings together the scholarship on the internal origins and development of nuclear physics in the 1930s with descriptions of the concurrent changes in private support for international basic science particularly as represented by Rockefeller Foundation philanthropy. In the process the book places the emergence of nuclear physics in a larger historical context. This book will appeal to

historians of science, physicists and advanced students in these areas. *Chemistry and Industry*, 1989 **Resources in Education**, 1982 *Abstract Bulletin of the Institute of Paper Chemistry*, 1982 *The Academy*, 1890 *The Academy and Literature*, 1890 **Publishers' Circular and General Record of British and Foreign Literature, and**
