*Paper Microfluidics* Shantanu Bhattacharya, Sanjay Kumar, Avinash K Agarwal, 2019-10-08 This volume provides an overview of the recent advances in the field of paper microfluidics whose innumerable research domains have stimulated considerable efforts to the development of rapid cost effective and simplified point of care diagnostic systems The book is divided into three parts viz theoretical background of paper microfluidics fabrication techniques for paper based devices and broad applications Each chapter of the book is self explanatory and focuses on a specific topic and its relation to paper microfluidics and starts with a brief description of the topic s physical background essential definitions and a short story of the recent progress in the relevant field The book also covers the future outlook remaining challenges and emerging opportunities This book shall be a tremendous up to date resource for researchers working in the area globally

**Nanomaterial - Based Biomedical Applications in Molecular Imaging, Diagnostics and Therapy** Amitabha Acharya, 2020-05-23 This book comprehensively reviews the recent advances in nanomaterial based molecular imaging diagnostics and personalized therapy It discusses the novel biocompatible fluorescent nanomaterials their synthesis and modern state of art characterization as well as the various strategies for immobilization of biomacromolecules on the nanomaterial surface and approaches for increasing their stability In addition the book describes the synthesis of lectin nanoconjugates using different types of biocompatible raw materials and their systematic characterization Lastly it presents our current understanding of the biomolecular corona which affects nanoparticle based targeted drug delivery and examines the conceptual approaches to improve the in vivo efficacy of targeted drug delivery Filamentous Bacteriophage in Bio/Nano/Technology, Bacterial Pathogenesis and Ecology Jasna Rakonjac, Bhabatosh Das, Ratmir Derda, 2017-02-16 Filamentous phage genus Inovirus infect almost invariably Gram negative bacteria They are distinguished from all other bacteriophage not only by morphology but also by the mode of their assembly a secretion like process that does not kill the host Classic Escherichia coli filamentous phage Ff f1 fd and M13 are used in display technology and bio nano technology whereas filamentous phage in general have been put to use by their bacterial hosts for adaptation to environment pathogenesis biofilm formation horizontal gene transfer and modulating genome stability Many filamentous phage have a symbiotic life style that is often manifested by inability to form plaques preventing their identification by standard phage hunting techniques while the absence or very low sequence conservation between phage infecting different species often complicates their identification through bioinformatics Nevertheless the number of discovered filamentous phage is increasing rapidly along with realization of their significance Temperate filamentous phage whose genomes are integrated into the bacterial chromosome of pathogenic bacteria often modulate virulence of the host The Vibrio cholerae phage CTXf genome encodes cholera toxin whereas many filamentous prophage influence virulence without encoding virulence factors The nature of their effect on the bacterial pathogenicity and overall physiology is the next frontier in understanding intricate

relationship between the filamentous phage and their hosts Phage display has been widely used as a combinatorial technology of choice for discovery of therapeutic antibodies and peptide leads that have been applied in the vaccine design diagnostics and drug development or targeting over the past thirty years Virion proteins of filamentous phage are integral membrane proteins prior to assembly hence they are ideal for display of bacterial surface and secreted proteins The use of this technology at the scale of microbial community has potential to identify host interacting proteins of uncultivable or low represented community members Recent applications of Ff filamentous phage extend into protein evolution synthetic biology and nanotechnology In many applications phage serves as a monodisperse long aspect nano scaffold of well defined shape Chemical or genetic modifications of this scaffold are used to introduce the necessary functionalities such as fluorescent labels ligands that target specific proteins or peptides that promote formation of inorganic or organic nanostructures We anticipate that the future holds development of new strategies for particle assembly site specific multi functional modifications and improvement of existing modification strategies These improvements will render the production of filamentous phage templated materials safe and affordable allowing their applications outside of the laboratory
