Bennett, 1981-02 There is hardly a technical library in the world in which the volumes of the Chemical Formulary Volumes 1 34 do not occupy a prominent place It does not duplicate any of the formulas included in previous volumes but lists a wide array of modern and salable products from all branches of the chemical industries An excellent reference for formulation problems Contents I Introduction II Adhesives III Beverages and Foods IV Cosmetics V Detergents and Disinfectants VI Drug Products VIII Metal Treatments IX Polishes X Textile Specialties XI Miscellaneous Appendix Index Preface Chemistry as taught in our schools and colleges concerns chiefly synthesis analysis and engineering and properly so

It is part of the right foundation for the education of the chemist. Many a chemist entering an industry soon finds that most of the products manufactured by his concern are not synthetic or definite complex compounds but are mixtures, blends or highly complex compounds of which he knows little or nothing. The literature in this field if any may be meager, scattered or obsolete. Even chemists with years of experience in one or more industries spend considerable time and effort in acquainting themselves with any new field which they may enter. Consulting chemists similarly have to solve problems brought to them from industries foreign to them. There was a definite need for an up to date compilation of formulae for chemical compounding and treatment. Since the fields to be covered are many and varied, an editorial board of chemists and engineers engaged in many industries was formed. Many publications, laboratories, manufacturing firms and individuals have been consulted to obtain the latest and best information. It is felt that the formulas given in this volume will save chemists and allied workers much time and effort. Manufacturers and sellers of chemicals will find in these formulae new uses for their products. Non chemical executives, professional men and interested laymen will make through this volume a speaking acquaintance with products which they may be using, trying or selling. It often happens that two individuals using the same ingredients in the same formula get different results. This may be due to slight deviations in the raw materials or unfamiliarity with the intricacies of a new technique. Accordingly repeated experiments may be necessary to get the best results. Although many of the formulas given are being used commercially, many have been taken from the literature and may be subject to various errors and omissions. This should be taken into consideration. Wherever possible it is advisable to consult with other chemists or technical workers regarding commercial production.
