James N. Spencer, George M. Bodner, Lyman H. Rickard, 2002-02-28 The second edition of Spencer's Chemistry Structure and Dynamics has been the most successful reform project published for the General Chemistry course. The authors have revised the text by building on the recommendations of the ACS's Task Force on the General Chemistry Curriculum and suggestions from the adopters of the first edition. This innovative text provides a fifteen chapter introduction to the fundamental concepts of Chemistry. A collection of additional topics at the end of each chapter allow instructors to supplement and tailor their courses according to individual need. Three major themes link the content of the book: the process of science, the relationship between molecular structure and physical chemical properties, and the relationship between the microscopic and macroscopic levels.

**Modern Statistics for Engineering and Quality Improvement** John Lawson, John Erjavec, 2000 Through years of teaching experience John S. Lawson and John Erjavec have learned that it doesn't take much theoretical background before engineers can learn practical methods of data collections analysis and interpretation that will be useful in real life and on the job. With this premise in mind the authors wrote ENGINEERING AND INDUSTRIAL STATISTICS which includes the basic topics of engineering statistics but puts less emphasis on the theoretical concepts and elementary topics usually found in an introductory statistics book. Instead the authors put more emphasis on techniques that will be useful for engineers. With fewer details of traditional probability and inference and more emphasis on the topics useful to engineers the book is flexible for instructors and interesting for students.
