

# Darwin's Theory of Evolution

## Across

- [3] Charles Darwin went on a five year voyage about the \_\_\_\_\_.  
 [5] The process of change over time is called \_\_\_\_\_.  
 [7] Lamarck suggested that individual could pass \_\_\_\_\_ traits on to their offspring.  
 [8] According to the principle of common descent, all species living and extinct are descended from ancient common \_\_\_\_\_.  
 [10] An inherited characteristic that increases an organism's ability to survive and reproduce in its environment is called an \_\_\_\_\_.  
 [11] \_\_\_\_\_ dating indicates the Earth is about 4.5 billion years old.  
 [12] The preserved remains or traces of ancient organisms.  
 [16] A/an \_\_\_\_\_ structure is a structure that is inherited from ancestors but has lost much or all of its original function.  
 [18] Variation within a species increases the likelihood the species will survive environmental \_\_\_\_\_.  
 [20] Darwin noticed that different yet related animal species often occupied different \_\_\_\_\_ within a local area.  
 [22] Darwin published his theory on evolution in the book: On the Origin of \_\_\_\_\_.  
 [23] Members of a population must \_\_\_\_\_ to obtain food, living space, and other limited necessities of life.  
 [24] Darwin proposed that natural selection had shaped the \_\_\_\_\_ of different bird populations as they became adapted to eat different foods.

## Down

- [1] At the molecular level, the universal \_\_\_\_\_ code and homologous molecules provide evidence of common descent.  
 [2] During his travels, Darwin studied species on the \_\_\_\_\_ islands.  
 [4] Structures that are shared by related species and that have been inherited from a common ancestor are called \_\_\_\_\_ structures.  
 [6] The difference between individual in a species is called \_\_\_\_\_.  
 [9] Body parts that share a common function, but not structure are called \_\_\_\_\_ structures.  
 [10] In \_\_\_\_\_ selection, nature provides the variation, and humans select those they find useful.  
 [13] The french naturalist \_\_\_\_\_ suggested that organisms could change during their lifetimes by selectively using or not using various parts of their bodies.  
 [14] Economist Thomas \_\_\_\_\_ reasoned that if human population grew unchecked, there wouldn't be enough living space and food for everyone.  
 [15] The Grants have documented that natural selection takes place in wild \_\_\_\_\_ populations frequently and sometimes rapidly.  
 [17] Darwin described the competition for limited resources as the struggle for \_\_\_\_\_.  
 [19] \_\_\_\_\_ selection is the process by which organisms with variations most suited to their local environment survive and leave more offspring.  
 [21] \_\_\_\_\_ describes how well an organism can survive and reproduce in its environment.
