

CHAPTER 2

Literature Review

Literature Review

- ▶ Purpose is to provide the reader with a comprehensive review of the literature related to the problem
- ▶ The review of related literature should greatly expand upon the introduction and background information presented in Chapter 1.
- ▶ a historical overview of the problem, current trends related to the problem, case studies and significant research data published about the problem.

Literature Review

- ▶ provide detailed explanation of previous researches that has been conducted on your topic

Chapter 2 Literature Review Algae:

Algae Detection and Removal Strategies for Drinking Water Treatment Plants, 2004 This manual for conventional water treatment plants outlines monitoring strategies for detecting the onset of algae blooms in drinking water sources as well as treatment strategies for minimizing the adverse effects of algae on unit process performance and finished water quality The manual draws on

Diethylthiolcarbamate] Richard Scott Yoo, 1979 **Production of biodiesel using lipase encapsulated in**

κ-carrageenan Pogaku Ravindra, Kenthorai Raman Jegannathan, 2014-10-08 This book explores a novel technique for processing biodiesel using lipase immobilization by encapsulation and its physical properties stability characteristics and application in stirred tank and re circulated packed bed immobilized reactors for biodiesel production The enzymatic processing of biodiesel addresses many of the problems associated with chemical processing It requires only moderate operating conditions and yields a high quality product with a high level of conversion and the life cycle assessment of enzymatic biodiesel production has more favourable environmental consequences The chemical processing problems of waste water treatment are lessened and soap formation is not an issue meaning that waste oil with higher FFA can be used as the feedstock The by product glycerol does not require any purification and it can be sold at higher price However soluble enzymatic processing is not perfect It is costly the enzyme cannot be recycled and its removal from the product is difficult For these reasons immobilized enzymatic process has been developed which retains the advantages of the soluble enzymatic process and reuse of the enzyme is possible which decreases the enzyme cost the biodiesel produced does not contain any enzyme residue and the activity of the enzyme can be increased by immobilization The drawbacks of the immobilized enzyme process are mass transfer limitation enzyme leakage the lack of a versatile commercial immobilized enzyme and some of immobilization methods involve toxic chemicals To overcome the drawbacks of the immobilized enzyme an attempt is made to use a degradable biopolymer carrageenan as a carrier for lipase immobilization Biomass and Biofuels from Microalgae Navid R. Moheimani, Mark P. McHenry, Karne de Boer, Parisa A. Bahri, 2015-04-11 This comprehensive book details the most recent advances in the microalgae biological sciences and engineering technologies for biomass and biofuel production in order to meet the ongoing need for new and affordable sources of food chemicals and energy for future generations The chapters explore new microalgae cultivation techniques including solid biofilm systems and heterotrophic production methods while also critically investigating topics such as combining wastewater as a source of nutrients the effect of CO₂ on growth and converting biomass to methane through anaerobic digestion The book highlights innovative bioproduct optimization and molecular genetic techniques applications of genomics and metabolomics and the genetic engineering of microalgae strains targeting biocrude production The latest developments in microalgae harvesting and dewatering

technologies which combine biomass production with electricity generation are presented along with detailed techno economic modeling This extensive volume was written by respected experts in their fields and is intended for a wide audience of researchers and engineers Anaerobic Treatment of Mine Wastewater for the Removal of Selenate and its Co-Contaminants Lea Tan,2018-09-03 Selenium Se pollution has led to several cases of severe aquatic ecosystem deterioration due to Se poisoning caused by bioaccumulation over time However the removal of selenate SeO_4^{2-} from wastewater streams with co contaminants has been largely considered as a black box in anaerobic biological systems using mixed consortia This research aimed at addressing the effect of wastewater characteristics i e co contaminants such as nitrate NO_3^- and sulfate SO_4^{2-} heavy metals and pH on the biological reduction of SeO_4^{2-} and evaluating process integration for Se laden wastewater treatment with co contaminants This study demonstrated that the presence of co contaminants can actually be beneficial for Se removal provided that the concentrations are carefully monitored and appropriate operating conditions and process configurations are used The Se removal total Se and SeO_4^{2-} efficiency increased by 30% in the presence of NO_3^- and or SO_4^{2-} compared to systems with SeO_4^{2-} alone Additionally an integrated process of an ion exchange IX column and bioreactors showed improved overall removal capacity for SO_4^{2-} and total Se The knowledge and information gained from this research can help in the advancement and application of biological processes i e predicting of reactor performance solving specific design or practical problems and implementing novel treatment techniques for Se laden mine wastewater **Modeling Benthic Processes and Their Interaction with Dynamic Water Column Transport**
