Science Curriculum Topic Study Page Keeley, Joyce Tugel, 2019-09-11 Today's science standards reflect a new vision of teaching and learning. How to make this vision happen. Scientific literacy for all students requires a deep understanding of the three dimensions of science education: disciplinary content, scientific and engineering practices, and crosscutting concepts. If you actively engage students in using and applying these three dimensions within curricular topics, they will develop a scientifically based and coherent view of the natural and designed world. The latest edition of this best seller, newly mapped to the Framework for K-12 Science Education and the Next Generation Science Standards (NGSS) and updated with new standards and research-based resources, will help science educators make the shifts needed to reflect current practices in curriculum, instruction, and assessment. The methodical study process described in this book will help readers intertwine content, practices, and crosscutting concepts. The book includes an increased emphasis on STEM, including topics in science, technology, and engineering. 103 separate curriculum topic study guides are arranged in six categories: Connections to content knowledge, curricular and instructional implications, concepts and specific ideas, research on student learning, K-12 articulation, and assessment. Teachers and those who support teachers will appreciate how Curriculum Topic Study helps them reliably analyze and interpret their standards and translate them into classroom practice, thus ensuring that students achieve a deeper understanding of the natural and designed world.

Environmental Science Michael L. McKinney, Robert M. Schoch, Logan Yonavjak, 2012. Updated with the latest data from the field. Environmental Science: Systems and Solutions, Fifth Edition, explains the concepts and teaches the skills needed to understand multi-faceted and often very complex environmental issues. The authors present the arguments, rebuttals, evidence, and counterevidence from many sides of the debate. The Fifth Edition includes new Science in Action boxes which feature cutting-edge case studies and essays contributed by subject matter experts that highlight recent and ongoing research within environmental science. With an Earth as a system approach, the text continues to emphasize Earth's intricate web of interactions among the biosphere, atmosphere, hydrosphere, and lithosphere and how we are central components in these four spheres. This flexible, unbiased approach highlights: 1) how matter cycles over time through Earth's systems; 2) the importance of the input-throughput-output processes that describe the global environment; 3) how human activities and consumption modify Earth's systems; 4) and the scientific, economic, and policy solutions to environmental problems. Revised and updated to reflect current trends and statistics within Environmental Science. New content on renewable energy, solar panels, and compact fluorescent light bulbs. The latest information on hydropower and the advantages and disadvantages of hydroelectric energy. The companion website includes robust learning tools that enable students to make full use of today's learning technology. Students will find practice quizzes, virtual flashcards, answers to in-text questions, and links to additional coverage regarding material discussed in the text. Instructor Resources include an instructor's manual, Test Bank, PowerPoint, Lecture Outline, Slides, and a PowerPoint.
