The Americans: Reconstruction Through the 20th Century Holt McDougal, 2002 Technical Reports Awareness Circular : TRAC. , 1987-07 **Universal Prostitution and Modernist Abstraction** Jaleh Mansoor, 2025-04-18 In *Universal Prostitution and Modernist Abstraction* Jaleh Mansoor provides a counternarrative of modernism and abstraction and a reexamination of Marxist aesthetics. Mansoor draws on Marx's concept of prostitution, a conceptual device through which Marx allegorized modern labor to think about the confluences of generalized and gendered labor in modern art. Analyzing works ranging from Édouard Manet's *Olympia* and Georges Seurat's *The Models* to contemporary work by Hito Steyerl and Hannah Black, she shows how avant-garde artists can detect changing modes of production and capitalist and biopolitical processes of abstraction that assign identities to subjects in the interest of value's impersonal circulation. She demonstrates that art and abstraction resist modes of production and subjugation at the level of process and form rather than through referential representation. By studying gendered and generalized labor, abstraction, automation, and the worker, Mansoor shifts focus away from ideology, superstructure, and culture toward the ways art indexes crisis and transformation in the political economic base. Ultimately, she traces the outlines of a counterpraxis to capital while demonstrating how artworks give us a way to see through the abstractions of everyday life.

Optical and Digital Image Processing Gabriel Cristobal, Peter Schelkens, Hugo Thienpont, 2013-02-12 In recent years, Moore's law has fostered the steady growth of the field of digital image processing, though the computational complexity remains a problem for most of the digital image processing applications. In parallel, the research domain of optical image processing has matured, potentially bypassing the problems digital approaches were suffering and bringing new applications. The advancement of technology calls for applications and knowledge at the intersection of both areas, but there is a clear knowledge gap between the digital signal processing and the optical processing communities. This book covers the fundamental basis of the optical and image processing techniques by integrating contributions from both optical and digital research communities to solve current application bottlenecks and give rise to new applications and solutions. Besides focusing on joint research, it also aims at disseminating the knowledge existing in both domains. Applications covered include image restoration, medical imaging, surveillance, holography, etc. A very good book that deserves to be on the bookshelf of a serious student or scientist working in these areas.
