Risk Measures - Value at Risk and Beyond Bernhard Höfler, 2008 Master's Thesis from the year 2007 in the subject Business economics Banking Stock Exchanges Insurance Accounting grade 1 A University of Graz Institut für Finanzwirtschaft language English abstract This thesis provides an exhaustive and well founded overview of risk measures in particular of Value at Risk VaR and risk measures beyond VaR Corporations are exposed to different kinds of risks and therefore risk management has become a central task for a successful company VaR is nowadays widely adapted internationally to measure market risk and is the most frequently used risk measure amongst practitioners due to the fact that the concept offers several advantages However VaR also has its drawbacks and hence there have been and still are endeavours to improve VaR and to find better risk measures In seeking alternative risk measures to try to overcome VaR's disadvantages while still keeping its advantages risk measures beyond VaR were introduced The most important alternative risk measures such as Tail Conditional Expectation Worst Conditional Expectation Expected Shortfall Conditional VaR and Expected Tail Loss are presented in detail in the thesis It has been found that the listed risk measures are very similar concepts of overcoming the deficiencies of VaR and that there is no clear distinction between them in the literature confusion of tongues would be an appropriate expression Two concepts have become widespread in the literature in recent years Conditional VaR and Expected Shortfall however there are situations

where it can be seen that these are simply different terms for the same measure. Additionally, other concepts are touched upon: Conditional Drawdown at Risk, Expected Regret, Spectral Risk Measures, Distortion Risk Measures, and other risk measures and modifications of VaR. Conditional Autoregressive VaR, Modified VaR, and Stable modelling of VaR are introduced. Recapitulatory, the basic findings of the thesis are that t

Risk management of projects. Theoretical foundations and approaches for Scrum Larissa Petersen, 2020-11-17 Research Paper undergraduate from the year 2017 in the subject Business economics Business Management Corporate Governance grade 1.0 AKAD University of Applied Sciences Stuttgart language English abstract As a result of global networking software development projects are carried out in cooperation with foreign specialists. This increases efficiency but also increases the probability of personnel, cultural, and legal risks. The software industry is highly dynamic and the market situation is changing due to the rapid development of new technologies. To complete projects efficiently, companies rely on agile development procedures such as Scrum. Although Scrum is not part of the project management procedures, it takes over some points from classic project management. Work packages must be prioritized, estimated, and planned for the individual sprints. Scrum has few risk management approaches, which means that gaps can be identified, e.g., risks due to missing fixed prices, planning reliability. Thus, software vendors are in the dilemma of having to balance the pace of product development and product quality while considering the risks. This paper provides an exemplary elaboration on how Scrum can be expanded with little time and cost input through risk management.

Business Risks as Legal Problem. Risk Management as Obligation for the Management Christoph Mootz, 2004-07-27 Seminar paper from the year 2004 in the subject Law Civil Private Trade Anti Trust Law Business Law grade 1.7 A Technical University of Darmstadt jurisprudence law language English abstract In the strict reflection, there is no difference regarding the legal basis of risk management between now and yesterday. Also according to the old law, the management was obligated to recognize developments which were threatening to the existence of the company. This is the comment of the Minister of Justice to the debate of the Gesetz zur Kontrolle und Transparenz im Unternehmensbereich KonTraG. Due to the rising rate of insolvencies, increasing number of company crises, and because of the corporate governance discussion, the legislator recognized the need to develop a new law. The KonTraG was introduced at the 5th of March 1998, which mainly influenced the Aktien and Handelsgesetzbuch. The consequences of this law are discussed, highly controversial by experts. There is no general opinion, particularly in terms of the commitment of the introduction of a risk management according to the 91 Abs. 2 AktG. The following analysis of the legal basis specifies the de facto obligations of a stock corporation management in regards to risk management. Chapter 2 gives a theoretical and historical introduction into the topic of risk management. It is essential to understand the meaning of risk management in terms of how a manager opposed to a lawyer would define it. Chapter 3 discusses the legal foundation of risk management. In order to understand the different obligations required by the new law, the chapter is separated into the analysis of the old legal foundation, then the new
