1. Shown below are concentric solid and dashed circles, each different in radius by 1 cm. Consider the circular pattern of a top view of water waves, where the solid circles are crests and the dashed circles are troughs.
 - a. Draw another set of the same concentric circles with a compass. Choose any part of the paper for your center (except the present central point). Let the circles run off the edge of the paper.
 - b. Find where a dashed line crosses a solid line and draw a large dot at the intersection. Do this for ALL places where a solid and dashed line intersect.
 - c. With a wide felt marker, connect the dots with smooth lines. These nodal lines lie in regions where the waves have canceled — where the crest of one wave overlaps the trough of another (see Figures 25.11 and 31.12 in the textbook).

Physical Science Study Committee,1961 *Tools and Modes of Representation in the Laboratory Sciences* U.

Klein,2013-04-17 constitutive of reference in laboratory sciences as cultural sign systems and their manipulation and superposition collectively shared classifications and associated conceptual frameworks and various forms of collective action and social institutions This raises the question of how much modes of representation and specific types of sign systems mobilized to construct them contribute to reference Semioticians have argued that sign systems are not merely passive media for expressing preconceived ideas but actively contribute to meaning Sign systems are culturally loaded with meaning stemming from previous practical applications and social traditions of applications In new local contexts of application they not only transfer stabilized meaning but also can be used as active resources to add new significance and modify previous meaning This view is supported by several analyses presented in this volume Sign systems can be implemented like tools that are manipulated and superposed with other types of signs to forge new representations The mode of representation made possible by applying and manipulating specific types of representational tools such as diagrammatic rather than mathematical representations or Berzelian formulas rather than verbal language contributes to meaning and forges fine grained differentiations between scientists concepts Taken together the essays contained in this volume give us a multifaceted picture of the broad variety of modes of representation in nineteenth century and twentieth century laboratory sciences of the way scientists juxtaposed and integrated various representations and of their pragmatic use as tools in scientific and industrial practice *The Vital Machine* David F. Channell,1991 In 1738 Jacques Vaucanson unveiled his masterpiece before the court of Louis XV a gilded copper duck that ate drank quacked flapped its wings splashed about and most astonishing of all digested its food and excreted the remains The imitation of life by technology fascinated Vaucanson's contemporaries Today our technology is more powerful but our fascination is tempered with apprehension Artificial intelligence and genetic engineering to name just two areas raise profoundly disturbing ethical issues that undermine our most fundamental beliefs about what it means to be human In *The Vital Machine* David Channell examines the history of our relationship with technology and argues that while the resolution of these issues may not be imminent a philosophical framework for dealing with them is already in place The source of our fears he suggests lies in an outmoded distinction between organic life and machines a distinction rooted in the two world views that have defined and guided Western civilization the mechanical and the organic The mechanical view holds that the universe is basically a machine we can understand it by breaking it down into its smallest components Even organisms are machines The organic view claims that there is something more some vital directive force The whole is more than just the sum of its parts Even machines are organisms Channell presents these polar views in a fascinating chronicle of human thought and achievement ranging over

the discoveries of Galileo Copernicus Newton and Einstein the philosophies of Plato Descartes Kant and Marx the fields of alchemy physics astrology and biology We see not only how the two views progressed independently but also how they influenced each other not only how they persisted but also how they changed Most fascinating of all we follow the emergence of a third all embracing world view as developments in genetics relativity quantum mechanics and computer intelligence force both science and philosophy to come to a more complex understanding of the universe As a central metaphor for this third view Channell proposes the vital machine And in this stimulating work by the same name he reveals how this new metaphor may provide us with the philosophical understanding we need to address the ethical issues our science has created
