 Jacques Barbet,Adrien Foucquier,Yves Thomas,2020-02-25 The combined effects of population growth and aging have led to
 an increase in the number of cancers Preventing diagnosing treating and curing cancer are therefore more than ever
 imperatives facing medicine especially to continue the decrease in cancers mortality rates and to improve the quality of
 survival Over time the classic modes of treatment surgery external beam radiotherapy chemotherapy have become more
 refined and efficient From the beginning of this century new therapeutic options have been developed targeted cancer
 therapy targeted radionuclide therapy and immunologic therapies based on monoclonal antibodies cellular therapy and
 vaccinations Artificial intelligence and machine learning are also being introduced to the field of oncology Starting with the
 basic scientific principles relevant to oncology this book explains and makes these concepts and innovations accessible to a
 wide audience especially in the interest of patients It also contributes to the oncological field of 4P medicine with 4P standing

 Mukesh,Aastha Sobti,2022-12-29 High throughput molecular technologies omics can help to decipher the contributions of
 different physiological systems and identify candidate molecules that are representative of different physiological pathways
 thereby allowing the discovery of biomarkers Notably the omics technologies along with and computational methods
 bioprospecting and artificial intelligence will continue to lead to better understanding of biological mechanisms that are
 responsible for physical attributes or phenotypes Research breakthroughs obtained through these technologies can be used
 to enhance productivity of food animals meet the increasing demand for animal sourced foods enhance high quality nutrient
 availability ensure nutrient safety mitigate the effects of climate variability and result in new technologies that provide
 continued improvement in food security worldwide Such breakthroughs are an urgent necessity because over the past 50
 years there has been an unprecedented increase in the world s population which will reach ten billion by the year 2050
 Innovative and technological advancements that enhance all aspects of food production will arise from basic fundamental
 research Besides food animal by products have found many applications in the fields of pharmaceuticals cosmetics and
 household and industrial products Hence the need to ameliorate the productivity reproductivity growth performance and
 disease resistance in animals has created a worldwide interest in gaining a deeper understanding of animal biology
 biotechnology and genomics and proteomics The present volume thoroughly discusses the omics studies in domestic and non
 domestic animals and their role in mitigation of various challenges ahead The volume thus focuses on i Omics genomics
 proteomics transcriptomics metabolonomics technologies in identifying characterizing biodiversity ii Role of molecular
 techniques for improvement of domestic and non domestic organisms iii Animal and alternative model systems using stem
 cells tissue engineering cell free systems 3D platforms etc for studying life phenomena iv Genetically modified organisms as
