Converging Perspectives on Conceptual Change Tamer G. Amin, Olivia Levrini, 2017-11-13 Conceptual change how conceptual understanding is transformed has been investigated extensively since the 1970s The field has now grown into a multifaceted interdisciplinary effort with strands of research in cognitive and developmental psychology education educational psychology and the learning sciences *Converging Perspectives on Conceptual Change* brings together an extensive team of expert contributors from around the world and offers a unique examination of how distinct lines of inquiry can complement each other and have converged over time Amin and Levrini adopt a new approach to assembling the diverse research on conceptual change the combination of short position pieces with extended synthesis chapters within each section as well as an overall synthesis chapter at the end of the volume provide a coherent and comprehensive perspective on conceptual change research Arranged over five parts the book covers a number of topics including the nature of concepts and conceptual change representation language and discourse in conceptual change modeling explanation and argumentation in conceptual change metacognition and epistemology in conceptual change identity and conceptual change Throughout this wide ranging volume the editors present researchers and practitioners with a more internally consistent picture of conceptual change by exploring convergence and complementarity across perspectives By mapping features of an emerging paradigm they challenge newcomers and established scholars alike to embrace a more programmatic orientation towards conceptual change

Stepping Stones to Science Kendall Haven, 1997-09-15 Bring science to life with these 13 action packed stories about famous scientists Students will learn basic skills and procedures of science while learning about such people as Shirley Jackson Charles Goodyear and James Wright The historically accurate accounts cover varied aspects of physical biological and earth sciences *Stepping Stones to Science* has been used as a recommended text at Clarion University of Pennsylvania

Models of Discovery and Creativity Joke Meheus, Thomas Nickles, 2009-10-08 Since the origin of the modern sciences our views on discovery and creativity had a remarkable history Originally discovery was seen as an integral part of methodology and the logic of discovery as algorithmic or nearly algorithmic During the nineteenth century conceptions in line with romanticism led to the famous opposition between the context of discovery and the context of justification culminating in a view that banned discovery from methodology The revival of the methodological investigation of discovery which started some thirty years ago derived its major impetus from historical and sociological studies of the sciences and from developments within cognitive psychology and artificial intelligence Today a large majority of philosophers of science agrees that the classical conception as well as the romantic conception are mistaken Against the classical conception it is generally accepted that truly novel discoveries are not the result of simply applying some standardized procedure Against the romantic conception it is rejected that discoveries are produced by unstructured flashes of insight An especially important

result of the contemporary study concerns the availability of descriptive and normative models for explaining discoveries and creative processes Descriptive models mainly aim at explaining the origin of novel products normative models moreover address the question how rational researchers should proceed when confronted with problems for which a standard procedure is missing The present book provides an overview of these models and of the important changes they induced within methodology As appears from several papers the methodological study of discovery and creativity led to profound changes in our conceptions of justification and acceptance of rationality of scientific change and of conceptual change The book contains contributions from both historians and philosophers of science All of them however are methodological in the contemporary sense of the term The central values of this methodology are empirical accurateness clarity and precision and rationality The different contributions realize these values by their interdisciplinary nature Some philosophically oriented papers rely on historical case studies and results from the cognitive sciences others on recent results from the computer sciences and or non standard logics The historically oriented papers address central philosophical questions and hypotheses

Software Goes to School David N. Perkins,1995 *Software Goes to School* brings together leading experts to offer an in depth examination of how computer technology can play an invaluable part in educational efforts through its unique capacities to support the development of students understanding of difficult concepts Focusing on three broad themes the nature of understanding the potential of technology in the classroom and the transformation of educational theory into practice the contributors discuss a wealth of subjects central to any efforts that intend to improve our schools Topics range from the difficulties students encounter when learning new ideas especially in science and mathematics to how the right software allows for hands on manipulation of abstract concepts to the social realities of the educational environment 37th AIAA/ASME/SAE/ASEE Joint Propulsion Conference & Exhibit ,2001 *Encyclopedia of Nonlinear Science* Alwyn Scott,2006-05-17 In 438 alphabetically arranged essays this work provides a useful overview of the core mathematical background for nonlinear science as well as its applications to key problems in ecology and biological systems chemical reaction diffusion problems geophysics economics electrical and mechanical oscillations in engineering systems lasers and nonlinear optics fluid mechanics and turbulence and condensed matter physics among others *Symbols and Embodiment* Manuel de Vega,Arthur M. Glenberg,Arthur C. Graesser,2008 Cognitive scientists have a variety of approaches to studying cognition experimental psychology computer science robotics neuroscience educational psychology philosophy of mind and psycholinguistics to name but a few In addition they also differ in their approaches to cognition some of them consider that the mind works basically like a computer involving programs composed of abstract amodal and arbitrary symbols Others claim that cognition is embodied that is symbols must be grounded on perceptual motoric and emotional experience The existence of such different approaches has consequences when dealing with practical issues such as understanding brain disorders designing artificial intelligence programs and robots improving psychotherapy or designing instructional programs

The symbolist and embodiment camps seldom engage in any kind of debate to clarify their differences This book is the first attempt to do so It brings together a team of outstanding scientists adopting symbolist and embodied viewpoints in an attempt to understand how the mind works and the nature of linguistic meaning As well as being interdisciplinary all authors have made an attempt to find solutions to substantial issues beyond specific vocabularies and techniques How Metaphors Guide, Teach and Popularize Science Anke Beger,Thomas H. Smith,2020-04-22 Metaphors are essential to scientists themselves and strongly influence science communication Through careful analyses of metaphors actually used in science texts recordings and videos this book explores the essential functions of conceptual metaphor in the conduct of science teaching of science and how scientific ideas are promoted and popularized With an accessible introduction to theory and method this book prepares scientists science teachers and science writers to take advantage of recent shifts in metaphor theories and methods Metaphor specialists will find theoretical issues explored in studies of bacteriology cell reproduction marine biology physics brain function and social psychology We see the degree of conscious or intentional use of metaphor in shaping our conceptual systems and constraining inferences Metaphor sources include social structure embodied experience abstract or mathematical formulations The results are sometimes innovative hypotheses and robust conclusions other times pedagogically useful if inaccurate stepping stones or at worst misleading fictions As of January 2023 this e book is freely available thanks to the support of libraries working with Knowledge Unlatched *The Body/mind Conceptual Framework & the Problem of Personal Identity* Albert Shalom,1985 **Encyclopedia of Sports Science** ,1997 Encyclopedia of Sports Science John Zumerchik,1997 Provides coverage of the mechanics of sport and the scientific principles involved plus entries and treatment The Physics of the Secret Doctrine William Kingsland,1910 Perception and Cosmology in Whitehead's Philosophy Paul Frederic Schmidt,1967 **References for Literary Workers** Henry Matson,1907 **American Men of Science** ,1949 **The Coevolution Quarterly** ,1984 **Space and Personality** Archibald Allan,1913 **Proceedings of the Second International Seminar : Misconceptions and Educational Strategies in Science and Mathematics** ,1987
