Time-dependent Behaviour and Design of Composite Steel-concrete Structures Gianluca Ranzi, Massimiliano Bocciarelli, Alejandro Pérez Caldentey, Gianluca Cusatis, Liugino Dezi, A. Abdullah Dönmez, Giovanni Di Luzi, Yue Geng, Raymond Gilbert, John Hewitt, Javier Jordán, Roberto Leon, Graziano Leoni, Marion Rauch, John van Rooyen, Riccardo Zandonini, Yu-Win Wang, 2021-09-15 Steel concrete composite structures are widely used

throughout the world for buildings and bridges A distinguishing feature of this form of construction is the combination of concrete and steel components to achieve enhanced structural performance The time dependent response of concrete and its influence on the service behaviour and design of composite structures are the main focus of this SED For the first time a publication combines a state of the art review of the research with the available design specifications of Europe Australia and New Zealand and USA This publication intends to enhance the awareness of the service response of composite structures and of the latest research and standards developments It is aimed at designers and researchers alike The review of research available in open literature is provided and arranged according to structural typologies i e slabs beams and columns It serves as background information for current service design rules and provides insight into the most recent research advancements The review of available design guidelines presents the similarities and differences of the recommended service design procedures influenced by concrete time effects Selected case studies of building and bridge projects show possible design approaches and the rationale required when dealing with the time dependent response and design of composite structures The authors of this publication are design engineers and academics involved in the service design and research on the time dependent response of composite structures
