pressures placed on plants by pollinators and the consequences for animal plant co evolution *Understanding Flowers and Flowering* the first edition of which won BES Marsh Book of the Year in 2009 begins by considering the evolution of flowers and the history of research into their development This is followed by a detailed description of the processes which lead to flower production in model plants The book then examines how flowers differ in shape structure and colour and how these differences are generated Finally it assesses the role of these various aspects of floral biology in attracting pollinators and ensuring successful reproduction This new edition has been completely revised and updated to reflect the latest advances in the field especially an increased understanding of the evolution of floral traits New chapters consider the genetic basis of the floral transition in diverse species as well as the evolutionary lability of floral form There is a new focus throughout on both phylogenetic position and morphological diversity across the angiosperm phylogeny *Understanding Flowers and Flowering* continues to provide the first truly integrated study of the topic one that discusses both the how and why of flowering plant reproductive biology
