**Pharmacology of the Coronary Circulation** Natalii V. Kaverina, 1965 Diseases associated with impairment of the coronary circulation are very common Hence the treatment of such diseases is a matter of considerable importance It is now considered one of the main problems of clinical medicine The basis for solving the problem is to enlarge our knowledge of the mechanisms of action of the drugs used to treat coronary insufficiency and to find new effective agents Owing to the complexity of physiological regulation of the coronary circulation there are many difficulties of a procedural order in studying it experimentally This was one of the reasons why ideas on the action of many pharmacological agents were derived until recently from the results of experiments involving the isolated heart When applied to the intact organism these ideas proved to be inexact and at times wrong Some ideas on the effects of certain drugs were based on experiments involving the intact organism but the data proved to be inexact due to the inadequacy of the method selected by the authors to determine the mechanism of action of a given substance Another reason for misconceptions of the effects of some drugs stemmed from insufficient knowledge and contradictory opinions expressed by various investigators on many aspects of the coronary circulation Now however advances in experimental techniques have produced new facts bearing on the physiological regulation of the cardiac blood supply This has given rise to the need to reexamine some matters concerned with the influence of pharmacological agents on the coronary circulation relying on modern ideas concerning its physiological regulation and using adequate experimental techniques Most drugs have complex mechanisms of action owing to the intimate relationship between the processes regulating the cardiac blood supply Elucidation of these mechanisms requires the use of various techniques each of which must be suited to the particular aspect under study This approach will result in a reappraisal of the action of several pharmacological agents on the coronary circulation Moreover we believe that the data in this book will be helpful in making more efficient use of these agents in the treatment of various forms of coronary insufficiency
