

Elsa Cardenas  
HLTH 3372-91L: 3-Day Diet Analysis Report

A) Average intake (The detailed, 3 day diet record is attached along with this document):

	Calories	Carbs	Fat	Protein	Cholest	Sodium	Sugars	Fiber
DAY 1:	1,392	116	55	111	141	791	62	19
DAY 2:	1,558	127	60	124	125	1,114	60	24
DAY 3:	1,440	117	54	115	70	1,130	60	18
<b>Average</b>	<b>1,463</b>	<b>120</b>	<b>56.3</b>	<b>116.6</b>	<b>112</b>	<b>1,011.6</b>	<b>60.6</b>	<b>20.3</b>

B) Elsa Cardenas' anthropometrics:

Sex: Female

Age: 26

Weight: 120 pounds (54.43kg)

(This is my current body weight since it falls within a healthy BMI range)

Height: 63 inches (1.6002m)

EER (from IOM):  $[354 - (6.91 \times \text{age})] + \text{PA} \times [(9.36 \times \text{wt in kg}) + (726 \times \text{ht in m})]$

EER:  $[354 - (6.91 \times 26)] + \text{PA} \times [(9.36 \times 54.43) + (726 \times 1.6002)]$

EER:  $[354 - 179.66] + 1.27 \times [(509.46) + (1,161.74)]$

EER:  $174.34 + 1.27 \times [509.46 + 1,161.74]$

EER:  $174.34 + 1.27 \times [1,671.2]$

EER:  $174.34 + 2,122.424$

EER: 2,296.764 calories/day

C) As per my diet analysis and EER calculations, if I continue my current [average] intake, I will most likely lose a significant amount of weight (833.764 calorie deficit/day).

I used my current body weight (120lbs) as the IBW for the EER calculation because my BMI is within healthy range. (21.3)

D) Upon analyzing my diet, there are few places where I can improve my diet:

I chose this period of 3 days because during this time I was working with a nutritionist, she lowered my calorie intake significantly because I was cutting weight for a competition. I had to lose 8 pounds in two weeks, so my activity level was high, and my calorie intake was lower than usual. The dramatic weight loss was carefully calculated; however it is not sustainable due to my high activity level. I am at normal body weight, so there is no need for a calorie deficit. My sugar intake comes from fruits, I use no added or refined sugars in my diet, and although it may seem like a high number, my fasting glucose levels have always been optimal when I get bloodwork checkups, with no risk of prediabetes. In addition, my average sodium intake is well below the Tolerable Upper Intake Level for adults (set at 2,300mg/day). Meaning I am not at risk for high blood pressure. My fiber intake is just below the recommended daily amount for women (21g-25g), so I could perhaps add a little more fiber rich foods to reduce my risk for gastrointestinal issues.

In summary, I must implement more protein, fiber, and carbohydrate intake due to my high activity level, to have enough muscle restoration and glycogen stores for energy.
