## Manual testing: What is it?

Program testing that is done manually by a QA Analyst is referred to as manual testing. It is done to find bugs in application that is still being developed. In manual testing, the tester examines each of the program or application's crucial components. Without the use of any automation program testing technologies, the program testers carry out the test cases and produce the test reports in this method. It is a traditional approach to all testing kinds and aids in the discovery of faults in application. To complete the program testing process, an experienced tester is typically used.
