**Bayesian Estimation and Inference in Computational Anatomy and Neuroimaging: Methods & Applications**

Xiaoying Tang,Thomas Fletcher,Michael I. Miller,2019-08-22 Computational Anatomy CA is an emerging discipline aiming to understand anatomy by utilizing a comprehensive set of mathematical tools CA focuses on providing precise statistical encodings of anatomy with direct application to a broad range of biological and medical settings During the past two decades there has been an ever increasing pace in the development of neuroimaging techniques delivering in vivo information on the anatomy and physiological signals of different human organs through a variety of imaging modalities such as MRI x ray CT and PET These multi modality medical images provide valuable data for accurate interpretation and estimation of various biological parameters such as anatomical labels disease types cognitive states functional connectivity between distinct anatomical regions as well as activation responses to specific stimuli In the era of big neuroimaging data Bayes theorem provides a powerful tool to deliver statistical conclusions by combining the current information and prior experience When sufficiently good data is available Bayes theorem can utilize it fully and provide statistical inferences estimations with the least error rate Bayes theorem arose roughly three hundred years ago and has seen extensive application in many fields of science and technology including recent neuroimaging ever since The last fifteen years have seen a great deal of success in the application of Bayes theorem to the field of CA and neuroimaging That said given that the power and success of Bayes rule largely depends on the validity of its probabilistic inputs it is still a challenge to perform Bayesian estimation and inference on the typically noisy neuroimaging data of the real world We assembled contributions focusing on recent developments in CA and neuroimaging through Bayesian estimation and inference in terms of both methodologies and applications It is anticipated that the articles in this Research Topic will provide a greater insight into the field of Bayesian imaging analysis      *Transactions of the American Institute of Electrical Engineers* American Institute of Electrical Engineers,1909 List of members in v 7 15 17 19 20      Electrical Engineering ,1906 Vols for 1887 1946 include the preprint pages of the institute s Transactions      **Telephony** ,1926      Evaluation of Multilingual and Multi-modal Information Retrieval Cross-Language Evaluation Forum.
