Image Compression Using a Double Differential Pulse Code Modulation Technique (DPCM/DPCM). Kuang-Hua Ma,1996

Mathematical Tools in Signal Processing with C++ & Java Simulations W.-H. Steeb,2005 In recent decades the study of signal processing has become increasingly complex with new techniques and applications constantly being developed for the processing transformation and interpretation of signals This book provides a comprehensive introduction to the traditional and modern methods used in signal processing It is designed to impart to the reader the mathematical techniques used in modelling signals and systems encompassing standard mathematical tools as well as newer techniques such as wavelets and neural networks C and Java implementations furnish these descriptions The book offers an excellent balance of theory and application beginning with a complete framework of discrete time signal processing

Transform Coding and Differential Pulse Code Modulation for Group 4 Facsimile DELTA INFORMATION SYSTEMS INC HORSHAM PA.,1987 This document compares Transform Coding with Differential Pulse Code Modulation DPCM in order to determine the relative effectiveness of each technique as applied to the compression of gray scale images for Group 4 facsimile permits the transmission of black white imagery only Consequently any input page containing gray scale information such as a photograph will be severely distorted by basic Group 4 machines However there are plans by the CCITT to add a Gray Scale option to the Group 4 facsimile standard for transmitting pictorial data Keywords Differential pulse code modulation DPCM Group 4 Gray scale Facsimile Transform coding RRH

Telecommunications Measurements, Analysis, and Instrumentation Kamilo Feher,1996-12-31 A rare text dedicated to high performance measurement techniques in modern communications It describes high performance measurement techniques for digital communications and digital signal processing in radio and microwave systems wire line channels as well as measurements for analog communications channels AUTHOR S COMMENTS The purpose of this book is to present the engineering considerations necessary for the comprehension of modern telecommunication measurement and related instrumentation and analysis techniques I wish to emphasize that this is not an academic book in the sense of analytical communications or measurement theory Rather it stresses the measurements experimental analysis and instrumentation problems related to communications systems PUBLISHER S COMMENTS This book provides a strong foundation for understanding the special problems associated with testing modern communications systems Its original publication anticipated the needs of communications engineers setting a foundation for current work The book s continued availability assures that new engineers will have access to a key reference text in this important area of technology

Digital Image Compression Techniques Majid Rabbani,Paul W. Jones,1991 In order to utilize digital images effectively specific techniques are needed to reduce the number of bits required for their representation This Tutorial Text provides the groundwork for understanding these image compression techniques and presents a number of different schemes that have proven useful The algorithms discussed in this book are concerned mainly with the compression

of still frame continuous tone monochrome and color images but some of the techniques such as arithmetic coding have found widespread use in the compression of bilevel images Both lossless bit preserving and lossy techniques are considered A detailed description of the compression algorithm proposed as the world standard the JPEG baseline algorithm is provided The book contains approximately 30 pages of reconstructed and error images illustrating the effect of each compression technique on a consistent image set thus allowing for a direct comparison of bit rates and reconstructed image quality For each algorithm issues such as quality vs bit rate implementation complexity and susceptibility to channel errors are considered

Analysis and Subjective Evaluation of Differential Pulse-Code Modulation Voice Communication

Systems Robert W. Donaldson, National Research Council of Canada. Reprints, Donald Chan, BRITISH COLUMBIA UNIV VANCOUVER DEPT OF ELECTRICAL ENGINEERING., 1968 Differential pulse code modulation DPCM has been proposed as a practical encoding scheme for speech television and telemetry signals In this paper the mean square error for DPCM systems is derived and its minimization by proper choice of system variables is examined A simple analytical method is then presented for optimizing the system bandwidth W the number of quantization bits L and the parameters of the DPCM feedback network when the input is a speech signal and channel noise is negligible A method is then developed for measuring the subjective quality of voice communication systems as a function of an arbitrary number of system parameters

The method was used to measure the quality of PCM speech and DPCM speech as a function of W and L Author **Data and Computer Network Communication** Shashi Banzal, 2007
