

Chapter 15 Digestion and Nutrition

Digestive System:

Digestion refers to the mechanical and chemical breakdown of foods so that nutrients can be absorbed by cells.

Consists of the ___Alimentary___ canal which is all of the organs the food actually passes through and the ___accessory___ organs that aid in digestion.

Digestion:

What is chemical digestion?

breaks down large nutrient molecules into smaller chemicals

What is mechanical digestion?

chemical composition is not changed by this process

Wall of Alimentary Canal:

The wall of the alimentary canal consists of the same four layers throughout its length, with only slight variations according to the functions of specific sections of the canal.

The inner layer is the ___mucosa___ that is lined with ___epithelium___ attached to connective tissue. It protects tissues of the canal and carries on secretion and absorption.

The next layer is the ___submucosa___ which is made up of ___loose___ connective tissue containing blood and lymph vessels and nerves; it nourishes the surrounding layers of the canal.

The ___muscularis___ layer consists of inner ___circular___ fibers and outer longitudinal fibers that propel food through the canal.

The outer layer, or ___serosa___, is composed of visceral peritoneum that protects underlying tissues and secretes ___fluid___ to keep the canal from sticking to other tissues in the abdominal cavity.

Movements of the Tube

The motor functions of the alimentary canal are of two types—___mixing___ movements and ___propelling___ movements.

The former movements occur when smooth muscles contract rhythmically in small sections of the tube.

The latter movements include a wavelike motion called ___peristalsis___, which is caused by contraction behind a mass of food as relaxation allows the mass to enter the next segment of the tube.
