Level One Algebraic Cusp Forms of Classical Groups of Small Rank Gaëtan Chenevier, David A. Renard,2015-08-21 The authors determine the number of level 1 polarized algebraic regular cuspidal automorphic representations of  $GL_n$  over  $\mathbb{Q}$  of any given infinitesimal character for essentially all  $n$  8 For this they compute the dimensions of spaces of level 1 automorphic forms for certain semisimple  $Z$  forms of the compact groups  $SO_7$   $SO_8$   $SO_9$  and  $G_2$  and determine Arthur s endoscopic partition of these spaces in all cases They also give applications to the 121 even lattices of rank 25 and determinant 2 found by Borcherds to level one self dual automorphic representations of  $GL_n$  with trivial infinitesimal character and to vector valued Siegel modular forms of genus 3 A part of the authors results are conditional to certain expected results in the theory of twisted endoscopy **Hypergeometric Orthogonal Polynomials and Their  $q$ -Analogues** Roelof Koekoek,Peter A. Lesky,René F. Swarttouw,2010-03-18 The present book is about the Askey scheme and the  $q$  Askey scheme which are

graphically displayed right before chapter 9 and chapter 14 respectively The families of orthogonal polynomials in these two schemes generalize the classical orthogonal polynomials Jacobi Laguerre and Hermite polynomials and they have properties similar to them In fact they have properties so similar that I am inclined following Andrews Askey [34] to call all families in the  $q$ -Askey scheme classical orthogonal polynomials and to call the Jacobi Laguerre and Hermite polynomials very classical orthogonal polynomials These very classical orthogonal polynomials are good friends of mine since most the beginning of my mathematical career When I was a fresh PhD student at the Mathematical Centre now CWI in Amsterdam Dick Askey spent a sabbatical there during the academic year 1969-1970 He lectured to us in a very stimulating way about hypergeometric functions and classical orthogonal polynomials Even better he gave us problems to solve which might be worth a PhD He also pointed out to us that there was more than just Jacobi Laguerre and Hermite polynomials for instance Hahn polynomials and that it was one of the merits of the Higher Transcendental Functions Bateman project that it included some newer stuff like the Hahn polynomials see [198, 10, 23]
