

Chapter 24, Magnetic Forces and Fields
Physics II, PHY 2054, Fall 2021

The electron has an electrical charge ($q_e = 1.6 \times 10^{-19} \text{ C}$) associated with it that produces an electric field that exerts forces on charged objects. The electron also has a magnetic moment that produces a magnetic field that interacts with moving charge and material with magnetic properties. The electric charge is the source of the magnetic field we experience in everyday life.

- ✓ Although the magnetic fields and electric fields originate from the same source (charge) they have very different properties!

Magnetic Fields (\vec{B}) – A magnetic field exists in an otherwise empty space if a charged object moving through that region experience a force due to its motion in the magnetic field or a magnetic material in that region of space experience a force due to its magnetism.

Current in wire

- The magnetic field and force are vectors therefore their magnitude and direction must be taken into account.

Units of Magnetic Field (\vec{B})

$$1 \text{ Tesla (T)} = 1 \text{ N/Am} = 1 \text{ weber/m}^2 \quad \text{or} \quad 1 \times 10^{-4} \text{ T} = 1 \text{ gauss (G)}$$

The Magnetic Field is analogous to other Fields – A field in physics is a condition in space that creates a force when an object is placed in that field with a property that interacts with that field. Charged objects that are moving or material with magnetic properties interact with the magnetic field.

Mass is the property for gravity, charge is the property for electric fields and moving charge is the property for the magnetic field

Gravitational Field	– Force per unit mass [N/kg]	$g = F_g/m$
Electric field	– Force per unit charge [N/C]	$E = F_E/q$
Magnetic Field	– Force per unit moving charge [N/(Cm/s)]	$B = F_B/qv$

Gordon, 1998 *From Atoms to Galaxies* Sadri Hassani, 2011-06-13 College students in the United States are becoming increasingly incapable of differentiating between proven facts delivered by scientific inquiry and the speculations of pseudoscience In an effort to help stem this disturbing trend *From Atoms to Galaxies A Conceptual Physics Approach to Scientific Awareness* teaches heightened scientific acuity as it educates students about the physical world and gives them answers to questions large and small Written by Sadri Hassani the author of several mathematical physics textbooks this work covers the essentials of modern physics in a way that is as thorough as it is compelling and accessible Some of you might want to know How did Galileo come to think about the first law of motion Did Newton actually discover gravity by way of an apple and an accident Or maybe you have mulled over Is it possible for Santa Claus to deliver all his toys Is it possible to prove that Elvis does not visit Graceland every midnight Or perhaps you ve even wondered If ancient Taoism really parallels modern physics If psychoanalysis can actually be called a science How it is that some philosophies of science may imply that a 650 year old woman can give birth to a child No Advanced Mathematics Required A primary textbook for undergraduate students not majoring in physics *From Atoms to Galaxies* examines physical laws and their consequences from a conceptual perspective that requires no advanced mathematics It explains quantum physics relativity nuclear and particle physics gauge theory quantum field theory quarks and leptons and cosmology Encouraging students to subscribe to proven causation rather than dramatic speculation the book Defines the often obscured difference between science and technology discussing how this confusion taints both common culture and academic rigor Explores the various philosophies of science demonstrating how errors in our understanding of scientific principles can adversely impact scientific awareness Exposes how pseudoscience and New Age mysticism advance unproven conjectures as dangerous alternatives to proven science Based on courses taught by the author for over 15 years this textbook has been developed to raise the scientific awareness of the untrained reader who lacks a technical or mathematical background To accomplish this the book lays the foundation of the laws that govern our universe in a nontechnical way emphasizing topics that excite the mind namely those taken from modern physics and exposing the abuses made of them by the New Age gurus and other mystagogues It outlines the methods developed by physicists for the scientific investigation of nature and contrasts them with those developed by the outsiders who claim to be the owners of scientific methodology Each chapter includes essays which use the material developed in that

chapter to debunk misconceptions clarify the nature of science and explore the history of physics as it relates to the development of ideas Noting the damage incurred by confusing science and technology the book strives to help the reader to emphatically demarcate the two while clearly demonstrating that science is the only element capable of advancing technology

Theory of the Stationary Self-Consistent Universe Avshalumov Alexander Shamailovich, Since the creation of GR and subsequent works in cosmology the question of the curvature of space in the Universe is considered one of the most important and debated to this day This is evident because the curvature of space depends whether the Universe expands contracts or is static These discussions allowed the author to propose a paradoxical idea simultaneous existence in the Universe of three interconnected space times positive negative and zero curvature and on this basis to develop a theory in which each space time plays its own role and develops in a strict accordance with its sign of curvature The three space time model of the structure of the Universe proposed by the author allows to solve many fundamental problems of modern cosmology and theoretical physics and creates the basis for building a unified physical theory including one that unites GR and quantum physics
