## GUIDED READING & PRACTICE WORKSHEETS

## RNA

**1**

(1) What information level is a unit of nucleic acid that stores a sequence code for protein synthesis. The principle of "mating partners." The genetic information in DNA is transcribed into RNA, which is then translated into proteins in a process called the Central Dogma of Biology. It includes the flow of information from DNA to RNA to proteins and the variety of important functions in the human body.

(2) What DNA, RNA is composed of a long chain of nucleotides. Nucleotides consist of a phosphate group, a sugar, and a nitrogenous base. RNA is composed of nucleotides and contains the sugar ribose instead of deoxyribose. RNA can be a single-stranded chain (mRNA) or a double-stranded chain (tRNA, rRNA). RNA is transcribed from DNA and carries genetic information to the ribosome.

(3) There are three main types of RNA, each with its own unique function.

1. Messenger RNA (mRNA) carries genetic information from DNA in the nucleus for creating a complementary strand of protein from the code on the RNA strand. Once this strand leaves the nucleus, it carries the genetic information to the ribosome and carries the instructions for making proteins in the cytoplasm.

2. Transfer RNA (tRNA) carries genetic information from mRNA into a specific sequence of amino acids, which are the building blocks of proteins. tRNA carries genetic information from DNA to the ribosome and carries amino acids to the growing polypeptide chain.

3. Ribosomal RNA (rRNA) is the site of protein synthesis and is a major component of ribosomes. Ribosomes are composed of rRNA and protein. They are found in the cytoplasm of a cell. Proteins are synthesized by the ribosome and the rRNA is the site of protein synthesis.

**RNAi** Gregory J. Hannon, 2003 In the past three years the use of double stranded RNA to silence gene activity has become widely and rapidly adopted RNA interference is highly specific and remarkably potent and it acts on cells and tissues far removed from the site of introduction The principles behind RNAi are just being uncovered but this laboratory technique has been applied effectively in a wide variety of animal and plant species Variations on RNAi are revolutionizing many approaches to experimental biology complementing traditional genetic technologies with a quicker and less expensive way of mimicking the effects of mutations both in cell cultures and in living animals Recent advances in the use of RNAi to engineer heritable silencing in mammals to alter stem cells for organ reconstitution and to alter the course of disease in model systems indicate that RNAi may have a future in disease therapy Written by pioneers in this new field and edited by Gregory Hannon one of its leading figures RNAi A Guide to Gene Silencing presents the principles of RNAi and reliable protocols for its laboratory use in *Caenorhabditis elegans* *Drosophila* plants avian embryos mammalian cells mouse oocytes and more This important and unique book is an essential laboratory resource for scientists studying gene regulation and for all experimental biologists interested in the emerging practical applications of RNAi

**Biology: How Life Works (Volume 1)** James Morris, 2013-01-04 Ordinarily textbooks are developed by first writing chapters then making decisions about art and images and finally once the book is complete assembling a test bank and ancillary media This process dramatically limits the integration across resources and reduces art media and assessments to ancillary material rather than essential resources for student learning Biology How Life Works is the first project to develop three pillars the text the visual program and the assessment at the same time All three pillars were developed in parallel to make sure that each idea is addressed in the most appropriate medium and to ensure authentic integration These three pillars are all tied to the same set of core concepts share a common language and use the same visual palette In this way the text visual program and assessments are integral parts of student learning rather than just accessories to the text
