

# Chapter 1 – Review Questions

---

## Questions:

- 1.1 Identify and list some uses of at least three emerging enterprise network applications.
- 1.2 Briefly describe a real-time communications (RTC) dashboard.
- 1.3 Briefly define convergence and describe the major business benefits of convergence.
- 1.4 Briefly describe the characteristics of unified communications (UC) and describe how UC contributes to personal, workgroup, and enterprise-wide performance gains.
- 1.5 Identify and briefly describe the four types of communication traffic carried by business networks.
- 1.6 Why has optical fiber cabling become common in enterprise network infrastructures?
- 1.7 Why is wireless transmission becoming more widely used by businesses?
- 1.8 Why is network security required in business data communication?
- 1.9 Name some of the most important standard-setting organizations and explain their functions.
- 1.10 Contrast the major characteristics of WANs with those of LANs and MANs.

## Solutions:

1.1 (1) Networks make it easier to manage geographically dispersed operating locations. (2) They also help organizations deliver information to workers in a timely manner, including anytime anywhere on a mobile device if necessary. (3) Networks improve communication and information management within and between business organizations. Good networks bring business partners closer together in ways that improve efficiency, customer service, agility, and innovation.

1.2 Communication traffic, both local (within a building or business campus) and long distance, has been growing at a high and steady rate for decades. Network traffic is no longer limited to voice and data and increasingly includes image and video. Increasing business emphasis on web services, remote access, online transactions, and social networking means that this trend is likely to continue.

As businesses rely more and more on information technology, the range of services that business users desire to consume is expanding. For example, mobile broadband traffic growth is exploding as is the amount of data being pushed over mobile networks by business users' smart phones and tablets. In addition, over time, mobile users are increasingly demanding high quality services to support their high resolution camera phones, favorite video streams and high-end audio.

Four technology trends are particularly notable:

- (1) The trend toward faster and cheaper, both in computing and communications, continues.
- (2) Today's networks are more "intelligent" than ever.
- (3) The Internet, the Web, and associated applications have emerged as dominant features for both business and personal network landscapes.
- (4) While there has been a trend toward mobility for decades, the mobility explosion has occurred and has liberated workers from the confines of the physical enterprise.
