Supercooling, Crystallization and Melting within Emulsions and Divided Systems Danièle Clausse ,Jean Pierre Dumas,2016-04-26 Emulsions simple mixed or multiple are essentially pure substances aqueous or organic binary solutions The have a wide range of uses including industrial cooling and heat transfer processes This monograph gives a brief overview of supercooling crystallization and melting processes within emulsions Differential scanning calorimetry DSC coupled with RX is the main technique used to demonstrate these processes Temperature readings in this work have been defined taking into account known nucleation laws These results have been used to show mass transfers occurring within mixed emulsions solid ripening or multiple emulsions composition ripening gas hydrate formation due to a chemical reaction between water and a diffuse specific compound these phenomena being described by diffusive models Other aspects of heat transfer process covered in this book include the latent energy released at crystallizations or absorbed at the melting which alters the temperature field through emulsions the kinetics of phase transformations and self regulation of temperature in nodules containing phase changing materials This monograph is intended for advanced chemistry graduates as well as industrial and chemical engineers working with cooling and heat transfer systems *Monodispersed Particles* Tadao Sugimoto,2019-11-16 Monodispersed Particles Second Edition covers all aspects of monodispersed particles including inorganic and polymer particles and their composites The book consists of four parts fundamentals preparation analyses and applications Specifically the fundamental part covers the theoretical insight into the surface energy of particles and its application to the formulation of the new theories of nucleation growth and habit formation of monodispersed particles In addition the theories of recrystallization and solid solution formation are introduced These fundamental theories are applied to the precise control of their size size distribution shape internal structure and composition leading to the design of diverse monodispersed functional particles widely used in basic science and modern industry This second edition is fully updated and revised detailing new theories and recent progress in the field of nanoparticles including advanced nucleation theory arrested growth mechanism for monodispersed nanoparticles and energetics of habit formation Additionally the text covers in depth insights into the anisotropic growth of Au and Ag nanoparticles the formation mechanisms of polycrystalline Au spheres iron oxide nanoparticles in heat up and hot injection processes amorphous TiO₂ spheres in a sol gel system anatase TiO₂ in a gel sol system and their shape control AgCl nanoparticles in a reverse micelle system organic inorganic hybrid liquid crystals and extensive biomedical applications Covers most of the known uniform particles including inorganic and polymer particles and their composites Includes development of novel fundamental theories of formation mechanisms full of the author s own original ideas and detailed background discussion on recent progress in the feild of nanoparticles and the latest advances in their applications Features 2000 bibliographic references providing a comprehensive guide to related study Physical Pharmaceutics-II Prof. (Dr.) Subash Philip ,Dr. Manasa Deepa R,Nikhil Suresh Bhujbal,2023-06-15 Unlock the comprehensive

e book on Physical Pharmaceutics II for B Pharm 4th Semester meticulously published by Thakur Publication and perfectly aligned with the PCI syllabus Dive into the depths of this critical subject and gain a deep understanding of the principles and applications of pharmaceutical formulation and drug delivery systems Access comprehensive content practical examples and key concepts in this invaluable resource Stay ahead in your studies with Thakur Publication s trusted expertise Purchase the e book now and embark on a transformative learning journey in physical pharmaceutics Enhance your understanding and excel in your academic pursuits with this essential resource

Clean Synthesis Using Porous Inorganic Solid Catalysts and Supported Reagents James H Clark,Chris N Rhodes,2007-10-31 Waste minimisation has a number of aims which include enhancing the intrinsic selectivity of any given process providing a means of recovering reagents in a form which allows easy regeneration and the replacement of stoichiometric processes with catalytic ones Solids as catalysts or as supports for other reagents offer potential for benefit in all these areas This monograph provides an overview of the properties of the more useful solid catalysts and supported reagents and highlights their most valuable applications in the preparation of organic chemicals in liquid phase reactions Clean Synthesis Using Porous Inorganic Solid Catalysts and Supported Reagents is concerned with the use of solid catalysts in the clean synthesis of organic chemicals The emphasis is on chemical processes of importance to the manufacture preparation of fine and speciality chemicals chemical intermediates and pharmaceutical intermediates especially where catalysis is not currently used or where current catalysts are homogeneous leading to difficult separation procedures and unacceptable levels of waste This book focuses on solid catalysts based on inorganic supports and covers the emerging area of chemically modified mesoporous solid catalysts
