

SCIENTIFIC REVOLUTION

The Scientific Revolution happened in Europe in the 1500s and 1600s (16th and 17th centuries). The Scientific Revolution wasn't a battle or war like the name implies. Instead, it was a time of discovery, advancement, and achievement in science and math. People wanted to understand the world around them.

Nicolaus Copernicus was one of the earliest significant people in the advancement of science, beginning in 1543. This mathematician couldn't accept that the Earth was the center of everything. Instead, he suggested that the Sun was the center of the universe, and Earth and the planets orbit around the Sun. Johannes Kepler agreed with Nicolaus Copernicus' theory. In 1619 he detailed three laws that explain how the planets move around the Sun. Also during this time, Andreas Vesalius published an illustrated book on human anatomy.

By 1610, Galileo Galilei invented a telescope. This device helped him see that the Moon wasn't smooth. He also determined that the Moon reflected light from the Sun. He observed the moons of Jupiter and phases of Venus, among other things. Galileo confirmed Copernicus' theory about the Sun being the center of the universe. He wrote a famous work explaining his findings. Unfortunately, the Catholic Church put him under house arrest because they disagreed. Galileo also explored the ideas of acceleration, deceleration, friction, and inertia. Albert Einstein once called Galileo "the Father of Modern Science."

Francis Bacon discovered the scientific method in 1620. Prior to this, scientists made up theories and then fit the theories to the results. However, Bacon established a series of steps to create the scientific method: ask questions, a hypothesis (educated guess), test the theory, and record observations.

In 1637, René Descartes founded modern philosophy. His famous quote was, "I think, therefore I am." In 1665, Robert Hooke used a microscope to study tiny matter and organisms. He developed the
