

**Concept-Development
Practice Page****9-1****Work and Energy**

1. How much work (energy) is needed to lift an object that weighs 200 N to a height of 4 m?

800 J

2. How much power is needed to lift the 200-N object to a height of 4 m in 4 s?

200 W

3. What is the power output of an engine that does 60,000 J of work in 10 s?

6 kW

4. The block of ice weighs 500 newtons.

- a. What is the mechanical advantage of the incline?

2:1

- b. How much force is needed to push it up the incline (neglect friction)?

250 N

5. All the ramps are 5 m high. We know that the KE of the block at the bottom of the ramp will be equal to the loss of PE (conservation of energy). Find the speed of the block at ground level in each case. [Hint: Do you recall from earlier chapters how long it takes something to fall a vertical distance of 5 m from a position of rest (assume $g = 10 \text{ m/s}^2$)? And how much speed a falling object acquires in this time? This gives you the answer to Case 1. Discuss with your classmates how energy conservation gives you the answers to Cases 2 and 3.]

Case 1: Speed = 10 m/s Case 2: Speed = 10 m/s Case 3: Speed = 10 m/s

Block on A reaches bottom first; greater acceleration and less ramp distance. Although it will have the same speed at bottom, the time it takes to reach that speed is different!

Invigorating Defense Governance Kathleen H. Hicks, 2008 Resources in education, 1986-04 **Theory and Design for Mechanical Measurements** Richard S. Figliola, Donald E. Beasley, 2014-12-15 Figliola and Beasley's 6th edition of *Theory and Design for Mechanical Measurements* provides a time tested and respected approach to the theory of engineering measurements. An emphasis on the role of statistics and uncertainty analysis in the measuring process makes this text unique. While the measurements discipline is very broad, careful selection of topical coverage establishes the physical principles and practical techniques for quantifying many engineering variables that have multiple engineering applications. In the sixth edition, *Theory and Design for Mechanical Measurements* continues to emphasize the conceptual design framework for selecting and specifying equipment, test procedures, and interpreting test results. Coverage of topics, applications, and devices has been updated, including information on data acquisition hardware and communication protocols, infrared imaging, and microphones. New examples that illustrate either case studies or interesting vignettes related to the application of measurements in current practice are introduced. *Spots for MATH - Teacher's Edition - Grade 1, Volume 2* Spots for M.A.T.H., 2012-08 **Piaget and Conceptual Development** D. Characterization and evolution over time** Patrick Armanious, 2021-08-24 Master's Thesis from the year 2020 in the subject Business Economics, Review of Business Studies, grade 1.0, Technical University of Berlin, language English. Abstract: The aim of this paper is to complement existing research on dynamic ecosystem strategies in the context of platforms. Two research questions will be answered: 1. How do competitive strategies of rival platform-based ecosystems evolve over time? 2. How can competitive strategies of rival platform-based ecosystems be characterized? A longitudinal multiple case study has been conducted. This multiple case study is pursuing an inductive theory building approach, as there is limited theoretical foundation on strategies in platform-based ecosystems. Five online food delivery ecosystems in the German market are analyzed. The business ecosystem perspective provides a holistic view on the interdependence across organizations. Yet, existing literature reveals little theoretical foundation with respect to ecosystem strategies in the context of platforms. Prior research includes a static view on ecosystem strategies, leading to characterizations such as the component

or system strategy Recently a newly presented strategy the bottleneck strategy provides a dynamic view on ecosystem strategies Unfortunately much literature exclusively study cooperation and competition between ecosystem partners however neglects to explain how and why cooperation and competition between rival ecosystems generally occurs *Concept Development in Nursing* Beth L.
