## Chapter 1: About Science

### Answers to Chapter 1 Review Questions

1. The era of modern science in the 16th century was launched when Galileo Galilei revised the Copernican view of the heliocentric universe, using experiments to study nature's behavior.
2. In *Conceptual Integrated Science*, we believe that focusing on math too early is a poor substitute for concepts.
3. We reason that it must be capable of being proved wrong.
4. Nonscientific hypotheses must be perfectly reasonable; they are nonscientific only because they are not falsifiable—there is no test for possible wrongness.
5. Galileo showed the fallacious of Aristotle's claim with a single experiment—dropping heavy and light objects from the Leaning Tower of Pisa.
6. A scientific fact is something that competent observers can observe and agree to be true; a hypothesis is an explanation or answer that is capable of being proved wrong; a law is a hypothesis that has been tested over and over and not contradicted; a theory is a synthesis of facts and well-tested hypotheses.
7. In everyday speech, a theory is the same as a hypothesis—a statement that hasn't been tested.
8. Theories grow stronger and more precise as they evolve to include new information.
9. The term *supernatural* literally means "above nature." Science works within nature, not above it.
10. They rely on subjective personal experience and do not lead to testable hypotheses. They lie outside the realm of science.
11. Science, art, and religion can work very well together, like strings on a guitar, when played together, the sound they produce can be a chord of profound richness.
12. Science is concerned with gathering knowledge and organizing it. Technology lets humans use that knowledge for practical purposes, and it provides the instruments scientists need to conduct their investigations.
13. Chemistry builds on physics by telling us how matter is put together, how atoms combine to form molecules, and how the molecules combine to make the materials around us. Biology is more complex than physical science (physics and chemistry), because it involves matter that is alive and, therefore, engaged in complex biochemical processes.
14. Integrated science is valuable because the real-life phenomena we are interested in typically involve principles from more than one branch of science; put another way, we study integrated science because the world is integrated.

### Answers to Chapter 1 Integrated Science Concepts

#### Chemistry and Biology: An Investigation of Sea Butterflies

1. The disciplines of biology and chemistry are needed to understand the behavior of the Antarctic amphipod.
2. The control used in the investigation was the pollens fed to the predator fish that were not treated with sea-butterfly extracts. The control was needed to see whether the chemical deterrent isolated from the sea butterfly deterred the predator fish.
3. McCoskey and Baker's hypothesis was that amphipods carry sea butterflies because sea butterflies produce a chemical that deters a predator of the amphipod. This is a scientific hypothesis because it would be proven wrong if the secreted chemical were found to not deter amphipod predators.

**Hybrid Solutions for the Modelling of Complex Environmental Systems** Christian E.

Vincenot, Stefano Mazzoleni, Lael Parrott, 2017-01-11 Systems studied in environmental science due to their structure and the heterogeneity of the entities composing them often exhibit complex dynamics that can only be captured by hybrid modeling approaches While several concurrent definitions of hybrid modeling can be found in the literature it is defined here broadly as the approach consisting in coupling existing modelling paradigms to achieve a more accurate or efficient representation of systems The need for hybrid models generally arises from the necessity to overcome the limitation of a single modeling technique in terms of structural flexibility capabilities or computational efficiency This book brings together experts in the

field of hybrid modelling to demonstrate how this approach can address the challenge of representing the complexity of natural systems Chapters cover applied examples as well as modeling methodology Nature-based Solutions for Circular Management of Urban Water Alexandros Stefanakis, Hasan Volkan Oral, Cristina Calheiros, Pedro Carvalho, 2024-03-12 Despite the strong economic growth of the last decades our modern global society is facing the existential threat of climate change It is now realized that the linear economic model is not sustainable in the long run and cannot sustain the life standards The new circular economy approach that is already under discussion suggests the adjustment of our priorities and the re orientation of the future infrastructure investments In this context we are looking for new innovative and sustainable solutions to increase the resiliency of our societies to protect and restore the ecosystems and to maintain the necessary economic growth without further undermining the planet s boundaries The well being of coming generations will depend on our ability to adapt our economies to this challenge In particular transforming today s cities into sustainable cities is one of the main adaptations that will be necessary A holistic approach looking at cities from a system s perspective is needed to achieve this goal Nature based solutions NbS serve exactly this ambitious and multi factorial purpose due to their inherent ability not only to tackle climate change but also to provide a series of ecosystem services and social benefits In the urban context NbS can deal with main challenges such as urban heat islands flooding treatment of wastewater and runoff and food provision At the same time NbS can provide a series of ecosystem services beneficial for the environment and the society including clean water production nutrient recovery heavy metals retention and a broad range of plant based materials In the new circular economy paradigm NbS can contribute to strategies for climate change adaptation and create a holistic resource management system for the urban biosphere Thus this book aims at providing a single reference that discusses the role and effectiveness of NbS in the urban environment and how these systems can contribute to the circular management of water nutrients and resources towards resilient sustainable and healthy cities The scope of the book extends to various fields and disciplines such as the built environment urban water and wastewater resource recovery urban farming smart sensing research and development technology and innovation society and governance Research studies pilot projects and case studies are part of the book **Science and Mathematics Curricular Developments Internationally, 1956-1974** International Clearinghouse on Science and Mathematics Curricular Developments, 1975 Comprehensive Curriculum for Gifted Learners Joyce VanTassel-Baska, 1994 Focuses on all the issues that teachers and administrators need to know about gifted learners This text covers the process of curriculum development adaptation of traditional content areas and non traditional curriculum areas like thinking skills leadership and the arts and humanities **Conceptual Integrated Science** Paul G.
