Stepping Stones to Science Kendall Haven, 1997-09-15 Bring science to life with these 13 action packed stories about famous scientists Students will learn basic skills and procedures of science while learning about such people as Shirley Jackson Charles Goodyear and James Wright The historically accurate accounts cover varied aspects of physical biological and earth sciences Stepping Stones to Science has been used as a recommended text at Clarion University of Pennsylvania

Models of Discovery and Creativity Joke Meheus, Thomas Nickles, 2009-10-08 Since the origin of the modern sciences our views on discovery and creativity had a remarkable history Originally discovery was seen as an integral part of methodology and the logic of discovery as algorithmic or nearly algorithmic During the nineteenth century conceptions in line with romanticism led to the famous opposition between the context of discovery and the context of justification culminating in a view that banned discovery from methodology The revival of the methodological investigation of discovery which started some thirty years ago derived its major impetus from historical and sociological studies of the sciences and from developments within cognitive psychology and artificial intelligence Today a large majority of philosophers of science agrees that the classical conception as well as the romantic conception are mistaken Against the classical conception it is generally accepted that truly novel discoveries are not the result of simply applying some standardized procedure Against the romantic conception it is rejected that discoveries are produced by unstructured flashes of insight An especially important

result of the contemporary study concerns the availability of descriptive and normative models for explaining discoveries and creative processes Descriptive models mainly aim at explaining the origin of novel products normative models moreover address the question how rational researchers should proceed when confronted with problems for which a standard procedure is missing The present book provides an overview of these models and of the important changes they induced within methodology As appears from several papers the methodological study of discovery and creativity led to profound changes in our conceptions of justification and acceptance of rationality of scientific change and of conceptual change The book contains contributions from both historians and philosophers of science All of them however are methodological in the contemporary sense of the term The central values of this methodology are empirical accurateness clarity and precision and rationality The different contributions realize these values by their interdisciplinary nature Some philosophically oriented papers rely on historical case studies and results from the cognitive sciences others on recent results from the computer sciences and or non standard logics The historically oriented papers address central philosophical questions and hypotheses

Software Goes to School David N. Perkins,1995 Software Goes to School brings together leading experts to offer an in depth examination of how computer technology can play an invaluable part in educational efforts through its unique capacities to support the development of students understanding of difficult concepts Focusing on three broad themes the nature of understanding the potential of technology in the classroom and the transformation of educational theory into practice the contributors discuss a wealth of subjects central to any efforts that intend to improve our schools Topics range from the difficulties students encounter when learning new ideas especially in science and mathematics to how the right software allows for hands on manipulation of abstract concepts to the social realities of the educational environment 37th AIAA/ASME/SAE/ASEE Joint Propulsion Conference & Exhibit ,2001 Encyclopedia of Nonlinear Science Alwyn Scott,2006-05-17 In 438 alphabetically arranged essays this work provides a useful overview of the core mathematical background for nonlinear science as well as its applications to key problems in ecology and biological systems chemical reaction diffusion problems geophysics economics electrical and mechanical oscillations in engineering systems lasers and nonlinear optics fluid mechanics and turbulence and condensed matter physics among others Symbols and Embodiment Manuel de Vega,Arthur M. Glenberg,Arthur C. Graesser,2008 Cognitive scientists have a variety of approaches to studying cognition experimental psychology computer science robotics neuroscience educational psychology philosophy of mind and psycholinguistics to name but a few In addition they also differ in their approaches to cognition some of them consider that the mind works basically like a computer involving programs composed of abstract amodal and arbitrary symbols Others claim that cognition is embodied that is symbols must be grounded on perceptual motoric and emotional experience The existence of such different approaches has consequences when dealing with practical issues such as understanding brain disorders designing artificial intelligence programs and robots improving psychotherapy or designing instructional programs

The symbolist and embodiment camps seldom engage in any kind of debate to clarify their differences This book is the first attempt to do so It brings together a team of outstanding scientists adopting symbolist and embodied viewpoints in an attempt to understand how the mind works and the nature of linguistic meaning As well as being interdisciplinary all authors have made an attempt to find solutions to substantial issues beyond specific vocabularies and techniques **How**
