Distance vs. Displacement

- Distance is the total length of travel
 - Measured in meters
- Displacement is the change in position with direction
 - Measured in meters
 - Displacement = final position - initial position
 - $\Delta X = X_f - X_i$

Speed and Velocity

- Average Speed is the total distance over time
 - o Measured in meters per second (m/s)
- Average Velocity is the displacement over total time
 - o Measured in meters per second (m/s)
 - o $V_{avg} = \Delta X / \Delta t = (X_f - X_i) / (t_f - t_i)$
- Instantaneous Velocity is the displacement over time
 - o The velocity at a certain instant of time
 - o Measured in meters per second (m/s)
- Note: When velocity is constant, the average velocity is equal to the instantaneous velocity at any time.

Acceleration

- Average acceleration is the rate of change of velocity with time
 - o Measured in m/s²
 - o $A_{avg} = \Delta V / \Delta t = (V_f - V_i) / (t_f - t_i)$
- Instantaneous Acceleration is the velocity per time
 - o The acceleration at a certain instant of time
 - o Measured in m/s²
- Does not depend on mass

Variations of equations:

$$V_{avg} = \frac{1}{2} (V_i + V_f)$$

$$V_f = V_i + at \text{ (when } t_i = 0)$$

$$X_f = X_i + V_i t + \frac{1}{2} at^2$$

$$\Delta X = V_i t + \frac{1}{2} at^2$$

$$V_f^2 = V_i^2 + 2a(X_f - X_i) \leftarrow \text{when don't have time}$$

* Note: When linear equations are vertical, accelerations will always be 9.81 m/s² DOWN

- When an object is thrown vertically upward then its speed on returning to its original starting point is the same as its initial speed.

Vectors

- Any quantity that refers to both a magnitude (number) and a direction
 - Displacement and Velocity are examples of vectors
- In projectile launch problems:

Teaching and Learning in a Digital World Michael E. Auer,David Guralnick,Istvan Simonics,2018-02-09 This book gathers the Proceedings of the 20th International Conference on Interactive Collaborative Learning ICL2017 held in Budapest Hungary on 27-29 September 2017 The authors are currently witnessing a significant transformation in the development of education The impact of globalisation on all areas of human life the exponential acceleration of technological developments and global markets and the need for flexibility and agility are essential and challenging elements of this process that have to be tackled in general but especially in engineering education To face these current real world challenges higher education has to find innovative ways to quickly respond to them Since its inception in 1998 this conference has been devoted to new approaches in learning with a focus on collaborative learning Today the ICL conferences offer a forum for exchange concerning relevant trends and research results and for sharing practical experience gained while developing and testing elements of new technologies and pedagogies in the learning context

 Agenda in Education the Workplace and Society Conference at the University of Wisconsin Stout This publication is a
 selection of papers and workshops from this groundbreaking conference The ideas presented here will help other educators
 and policy makers to develop their own innovative high impact ideas for inspiring student interest in STEM careers
 improving the delivery of STEM education at their schools and colleges and helping STEM college graduates transition to the
 workplace The chapters in this book reflect research and best practices integrating the ideas of continuous improvement in
 combination with a can do attitude to provide a valuable resource that will lead others to consider similar innovative and
 collaborative educational structures that will drive more interest in STEM majors in college and provide for our next
 generation of scientists technicians and engineers Prior to reviewing Advancing the STEM Agenda I had a list in my mind of
 topics that I hoped would be addressed I m very pleased with how many are covered and covered well This project succeeds
 at the challenge of providing not only beneficial breadth but also important depth Because our public private partnership has
 been committed explicitly to continuous improvement for more than a decade I couldn t help but notice as the editors also
 point out in their conclusion the extent to which continuous improvement is a common thread throughout the book That
 speaks to the book s practical utility in many settings and on a long term basis No less valuable is the discussion of student
 motivation by many of the authors which STEM teachers in our area have identified as a major issue of interest to them in
 recent surveys Richard Bogovich Executive Director Rochester Area Math Science Partnership Minnesota Veenstra Padr and
 Furst Bowe provide a huge contribution to the field of STEM education We all know the statistics and of the huge need in the
 area of STEM students and education but what has been missing are application and success stories backed by research and
 modeling The editors have successfully contributed to our need by focusing on collaborative models building the K 12

 innovative ideas John J Jasinski President Northwest Missouri State University Advancing the STEM Agenda provides a broad
