A comprehensive analysis of the educational context for engineering professionals focuses on enrolment, graduation and throughput trends in all engineering disciplines at universities and universities of technology and reveals that although there have been positive innovations in education and training strategies in recent years, many issues, especially at secondary school level, remain a challenge. Women in engineering is a particular focus of this study, which devotes a chapter to examining the factors that influence their choice of career, the barriers they experience in the labour market and strategies for encouraging women into the profession. This comprehensive monograph offers valuable quantitative and qualitative information about engineering capacity across all engineering disciplines in South Africa. It is therefore an important reference for all engineering academics as well as decision makers in both the private and public sectors and will be useful to aspiring and current engineering students whatever their field.
