*Differential Equations with Boundary Value Problems* James R. Brannan, 2010-11-08 Unlike other books in the market this second edition presents differential equations consistent with the way scientists and engineers use modern methods in their work Technology is used freely with more emphasis on modeling graphical representation qualitative concepts and geometric intuition than on theoretical issues It also refers to larger scale computations that computer algebra systems and DE solvers make possible And more exercises and examples involving working with data and devising the model provide scientists and engineers with the tools needed to model complex real world situations      **Differential Equations** James R.

Brannan provides engineers with both an introduction to and a survey of modern methods, applications and theory of a powerful mathematical apparatus that will help them in the field. Section exercises of varying levels of difficulty give them hands-on experience in modeling analysis and computer experimentation. New coverage is included on series solutions of second-order linear equations, partial differential equations and Fourier Solutions and boundary value problems and Sturm Liouville Theory. The companion ODE Architect CD arms them with a user-friendly software tool for computing numerical approximations to solutions of systems of differential equations and for constructing component plots, direction fields and phase portraits. Physical representations of dynamical systems and animations available in the ODE Architect enable engineers to visualize solutions routinely.
